Mirror

Safety and overview in every situation

Our comprehensive selection of mirrors offers optimal solutions for a wide range of applications. Whether in traffic, in industry, or for observation – you will find high-quality mirrors with us that improve safety and visibility. Also discover our special mounting accessories to install mirrors securely and permanently.

Traffic mirror 7

Industrial mirror	13
Observation mirror	14
Mounting accessories for mirrors	21

- Mirror surface made of SEKURIT safety glass
- 10 years warranty
- High optical quality
- Impact and shock resistant
- UV and weather resistant

Diamond 1+2

DIAMOND traffic mirror

The DIAMOND with its brilliant reflection is so unusually robust and durable that you receive a functional warranty of ten years on every mirror!

It is used where high demands are placed on the optical quality of the reflection: traffic regulation, traffic safety, monitoring of production processes.

Evenly curved mirror surface. The mirror is impact and shock resistant due to the SEKURIT safety glass – and

provides protection against injuries (in case of breakage or chipping).

Weather and UV resistant, white plastic frame. Red areas are reflective.

The mount allows the mirror to be attached in any position. The clamp has a diameter of 76 mm (clamp for 108 mm or band clamp adapter available for an additional charge).

Additionally equipable with electric heating (see table).

Traffic mirror

- Made of durable stainless steel •
- Extremely robust and durable •
- Very temperature resistant •
- Low risk of fogging •
- Resistant to chemicals •
- Edge red-white reflective •
- 25 years functional warranty

DURABEL PRO
Traffic mirror

The Durabel PRO model offers maximum durability and top optical quality. The mirror surface made of high-quality stainless steel guarantees a clear, distortion-free image reproduction. In combination with the stable aluminum frame, the mirror is optimally protected against weather influences.

The red-white reflective stripes increase the visibility of the mirror and thus actively contribute to traffic safety.

Especially suitable in cases of high air pollution, aggressive splashing water, or risk of vandalism.

Due to the years of service life without loss of brilliance, the DURABEL PRO is an extremely economical investment.

Universal clamp for posts 60-90 mm. Optionally, fastening with band clamps is possible. No adapter necessary.

DURABEL PRO	Image size (mm)	Distance (m)	Shipping weight kg/pc.	Article	€/St.
PRO 1	450 x 600	4	10	242.12.680	
PRO 2	600 x 800	10	15	242.11.505	
PRO 3	800 x 1.000	15	22	242.10.092	

- Fog and ice-free • Clear visibility even at below -20°C • No power supply required • Made of durable stainless steel • Edge red-white reflective • 25 years functional warranty

DURABEL IceFree PRO Traffic mirror

The DURABEL IceFree PRO combines the proven mirror front of the DURABEL stainless steel mirror with a new, thermoactive gel. This regulates the temperature of the mirror surface depending on the outside temperature. This prevents fogging and icing.

Robust and unbreakable. Particularly suitable for places without a power source or with changeable weather conditions.

The back wall made of stable aluminum protects the patented thermal layers. Red-white reflective eye-catching edge.

Universal clamp for posts 60-90 mm. Optionally, fastening with band clamps possible. No adapter necessary.

PRO 1 NEW in the range

DURABEL IceFree PRO	Image size (mm)	Distance (m)	Shipping weight kg/pc.	Article	€/piece
PRO 1	450 x 600	4	19	242.17.6396	
PRO 2	600 x 800	10	25	242.14.389	
PRO 3	800 x 1.000	15	36	242.15.533	

Traffic mirror

DURABEL ECO traffic mirror

The Durabel ECO combines a brilliant mirror image with a high-quality plastic frame and offers an excellent price-performance ratio.

The robust construction made of shatterproof stainless steel mirror surface and a shock and scratch-resistant frame made of ABS and PMMA makes this mirror particularly durable.

This mirror is primarily used in heavily used outdoor areas.

Universal clamp for posts 60-90 mm. Optional mounting with band clamp possible. No adapter necessary.

- Mirror surface made of stainless steel
- Good image reproduction
- Cost-effective
- Long-term UV-stable and robust
- Rectangular and round design
- 15 years functional warranty

Note:

Combines the durability of stainless steel with the advantages of plastic.

DURABEL IceFree ECO traffic mirror

Fog and ice-free traffic mirror with a mirror cover made of stainless steel. White, weather-resistant plastic frame with red reflective stripes.

Especially suitable for places without a power source or with changeable weather conditions.

The DURABEL IceFree ECO complements the DURABEL ECO with the proven thermoactive gel pad. This regulates the temperature of the mirror surface depending on the outside temperature. This prevents fogging and icing. The result is a cost-effective, fog-free mirror.

- Fog and ice-free
- Clear visibility even at below -20 °C
- No power supply required
- Mirror edge made of durable stainless steel
- 15 years warranty

Universal clamp for posts 60-90 mm and integrated band clamp fastening (No adapter needed anymore.)

15 years functional warranty

DURABEL BASIC Traffic Mirror

The shiny mirror surface made of stainless steel provides a clear, distortion-free image reproduction. The stable frame made of galvanized steel and the direct application of the reflective strips on the mirror lens ensure a functional, simple design – ideal for cost-conscious use.

An additional rubber lip protects the mirror lens and frame from weather influences and increases resilience.

Thanks to the swivel and tilt mount for 76 mm pipe posts, the mirror can be adjusted flexibly.

- Mirror surface made of stainless steel
- Good image reproduction
- Cost-effective
- Durable and robust
- 5 years functional warranty

Note:

Perfect for demanding areas where a solid, cost-effective mirror is needed.

DURABEL IceFree BASIC Traffic Mirror

This version combines the cost-conscious Durabel Basic quality mirror with the proven IceFree technology. This keeps the mirror surface clear and fully functional even in fog and icing conditions.

Ideal for locations that require a cost-effective yet reliable solution for all weather conditions.

Thanks to the swivel and tilt mount for 76 mm pipe posts, the mirror can be adjusted flexibly.

- Free from fittings and icing
- Mirror surface made of stainless steel
- Good image reproduction
- Cost-effective
- Durable and robust
- 5 years functional warranty

Traffic mirror

EUCRYL® traffic mirror

Traffic mirror for outdoor and indoor use. Mirror image made of acrylic glass of high optical quality.

The mirror surface is strongly curved – thus providing a large observation angle.

The lightweight mirror is delivered ready for installation.

The UV-stable plastic frame is corrosion-free and weather resistant. The red areas of the attention-grabbing edge reflect.

The integrated mounting for pipe posts with a diameter of 60 to 76 mm allows for the mirror to be mounted in any position.

Rectangular and round designs available.

For large observation distances also in 1,000 x 1,200 mm.

- i

 - Mirror surface made of acrylic glass
 - High optical quality
 - Installation-friendly
 - Low weight
 - UV and weather resistant
 - Also available in 1,000 x 1,200 mm

EUCRYL	Image size (mm)	Distance (m)	Shipping weight kg/pc.	Article	€/piece
1	400 x 600	5	5	243.10.847

EUCRYL® ECO traffic mirror

High-quality, impact-resistant traffic mirror made of acrylic glass for outdoor and indoor use. The uniformly curved mirror surface provides good image reproduction.

Cost-optimized through a frameless design with red reflective film on the mirror surface.

The EUCRYL ECO is delivered ready for installation and can be mounted by one person due to its low weight.

The integrated bracket for pipe posts from 60 to 76 mm Ø allows for the attachment of the mirror in any position.

- i

 - Mirror surface made of acrylic glass
 - Easy to install
 - Lightweight
 - Economical

EUCRYL ECO	Mirror size (mm)	Distance (m)	Shipping weight kg/pc.	Article	€/piece

3	800 x 1.000	15	7.5	243.26.714	

- For indoor and protected outdoor areas
- Good optical quality
- Yellow-black frame according to ASR A1.3
- Rectangular and round design
- Low weight

EUCRYL® industry mirror

For indoor and protected outdoor areas. Ideal for production sites, warehouses, for monitoring manufacturing processes, personnel and forklift traffic.

The uniform curvature allowed for very good image reproduction.

Impact-resistant acrylic glass mirror in good optical quality. Corrosion-free. The lightweight mirror is delivered ready for installation. Yellow plastic frame with black warning stripes in accordance with ASR A1.3 (DIN 4844).

The integrated holder for pipe posts with a diameter of 60 and 76 mm allows for the attachment of the mirror in any position.

Short wall arm for mounting on vertical surfaces. The mirror can thus be mounted in both landscape and portrait formats.

Industry mirror/observation mirror

SPION industry mirror

Acrylic glass mirror for indoor and protected outdoor areas.

Ideal for observing access areas and internal processes (machine control, traffic routes).

Light. Extremely impact-resistant.

Excellent optical properties. Wide-angle effect for short observer distance.

Mounting:

- Round mirror with mounting for wall installation

More information about the product:

- For indoor and protected outdoor areas
- Very good image reproduction
- Easy to mount and adjust
- Low weight

HORIZONT three-way mirror

Compact 180° wide-angle mirror for three-way intersections.

Made of robust, impact-resistant acrylic glass for indoors and outdoors. With high optical quality. UV and weather resistant.

The HORIZONT is ideal when it gets "tight" and the observer is not far from the mirror.

At three-way intersections, a single HORIZONT replaces two conventional mirrors.

The lightweight mirror is delivered ready for installation.

The integrated bracket for pipe posts with 60 and 76 mm Ø allows for the attachment of the mirror in any position.

Can also be mounted upright (90° viewing angle) in conjunction with a wall arm.

- 180° viewing angle (three-way mirror)
- High optical quality
- UV and weather resistant
- Low weight

DETECTIVE observation mirror

Observation and control mirror made of acrylic glass for indoor use.

Prevents accidents; prevents theft. Proven for many years in retail, in sales areas, production and storage halls, public institutions.

Lightweight. No risk of injury. Extremely impact-resistant. Excellent optical properties. Strong wide-angle effect: Recommended for short observer distances and medium to large fields of view. Mounting on flat surfaces.

- For indoors
- Strong wide-angle effect
- Lightweight
- Angle adjustable
- With wall mounting bracket

(e.g. walls, supports, beams) using the included bracket with a wall distance of approximately 250 mm.

Option: extended wall arm approximately 550 mm

DETECTIVE ECO observation mirror

Cost-effective, lightweight round mirror made of acrylic glass with excellent optical properties. Mirror frame and bracket in black. Discreetly blends into the surroundings.

Especially suitable for sales areas, entrance areas, and public facilities.

Strong wide-angle effect, ideal for short observation distances and medium to large fields of view.

- For indoors
- Extremely lightweight
- Four sizes
- With holder and fastening material

With goose neck holder for attachment to flat surfaces. Wall distance approximately 300 mm. Viewing angle individually adjustable.

Observation mirror

DETECTIVE with magnetic holder

Round mirror made of acrylic glass, with a strong adhesive magnetic base in an aesthetically pleasing chrome frame.

Mirror housing made of ABS plastic. Usable for indoor and protected outdoor areas.

Light. No risk of injury. Extremely impact-resistant.

Excellent optical properties. Strong wide-angle effect: Recommended for short observer distance and medium to large field of view.

- For indoors
- Made of acrylic glass
- With magnetic base
- Large observation field
- Excellent image quality

For mounting on flat, straight steel surfaces. Gooseneck mount with a wall distance of 200 mm – for individually adjustable viewing angle.

INDOOR room mirror

Compact interior mirror made of acrylic glass with black border. Low, space-saving design.

Wide field of view. Optically excellent, distortion-free image reproduction. Easy wall mounting. Black edge trim with pre-drilled mounting holes.

Two versions:

- Oval for short observer distances (e.g. in entrance halls, reception areas, sales rooms, workshops)

- Extremely large field of view
- Compact
- Brilliant image
- For office and operation

- Round for larger observer distances (e.g. storage halls, production lines, parking garages)

INDOOR stainless steel

Round, unbreakable anti-vandalism mirror made of high-quality, stainless steel. For indoor and outdoor use.

Especially suitable for subways, train stations, underpasses, correctional facilities, psychiatric institutions.

Recommendation: Mounting with tamper-proof Torx security screws (Torx with pin).

- Made of stainless steel
- Anti-vandalism
- Extremely large field of observation
- Brilliant image

Mirror size (mm) Ø x T	Distance (m)	Shipping weight kg/pc.	Article	€/pc.

Torx screws 6.5 x 45 mm		0.2	245.27.882	

MORION justice mirror

Unbreakable anti-vandalism mirror made of high-quality, stainless steel.

Designed for areas with a high risk of willful destruction (vandalism): correctional facilities, police and military stations, clinics, psychiatric hospitals.

Provides increased safety for staff, inmates, and patients.

The stainless steel mirror is framed in a coated steel frame. The recessed drill holes accommodate screw heads, so there are no surfaces for manipulation. Fastening with Torx security screws (Torx with pin – 7 pieces per mirror).

- Made of stainless steel
- Anti-vandalism
- For security areas
- Brilliant image

Observation mirror

- i*
 - For indoors
 - Made of acrylic glass
 - Distortion-free 360° panoramic view
 - Ideal for forklift traffic
 - Prevents accidents and thefts
 - Extreme wide-angle effect

PANORAMA-360
Four-way mirror

Hemispherical safety mirror for indoors made of acrylic glass. The distortion-free 360° panoramic view allows for visibility in all directions.

For production halls, warehouses (accelerates traffic flow), sales areas (theft protection), hospitals. Mitigates danger in unclear areas.

Simple installation:
Screw directly onto flat surfaces (e.g. ceilings, beams, underbeams). Or attach freely hanging with installation set (chain link, 4 m length).

Mirror size (mm) Ø x T	Distance (m)	Shipping weight kg/pc.	Article	€/St.

Assembly set (chain length 4 m), for hanging installation		0.7	255.10.618	

PANORAMA-180 Three-Way Mirror

The super wide-angle mirror provides an overview in critical areas: narrow corridors, "blind spots" in industry, administration, hospitals, retail.

The PANORAMA-180 is a three-way mirror for securing narrow internal T-junctions. Mounted directly at the intersection, the PANORAMA-180 secures it optimally from all sides.

Especially flat design for minimal space requirements.

Wall mounting with standard screws.

- For indoors
- Made of acrylic glass
- Viewing angle 180°
- Low space requirement

Mirror size (mm) W x H x D	Distance (m)	Shipping weight kg/pc.	Article	€/St.
600 x 320 x 240	5	3	256.17.911

1,000 x 530 x 400	8	4.5	256.17.882	

PANORAMA-90 Two-Way Mirror

The PANORAMA-90 is a two-way mirror for securing bending traffic routes and corridors in industry, sales areas, administration, and hospitals.

Space-saving corner placement. Ceiling mounting with standard screws.

- For indoors
- Made of acrylic glass
- Viewing angle 90°
- Low space requirement

Observation mirror

VISION roll mirror

Easily and conveniently perform safety checks on vehicle undersides.

Round acrylic glass mirror with a two-part telescopic rod, extendable from 100 to 200 cm. Curved mirror surface with a large observation field. Including protective bag.

Construction height 138 mm. With four wheels for easy movement of the mirror under the vehicle.

Option: Special lamp with a tilt joint for direct illumination of the underside of the vehicle.

- For vehicle inspection
- Made of acrylic glass
- Large observation field
- Telescopic rod
- Can be equipped with a lamp

VISION hand mirror

Ideal for particularly hard-to-reach areas, universally applicable. Very handy.

Best suited for checking hard-to-see areas in a targeted manner (e.g. production and crafts).

With a two-part telescopic pole, extendable from 100 to 200 cm. Curved mirror surface with a large observation field. Including protective bag.

Option: Special lamp with a tilt joint for direct illumination of the inspection area.

- Made of acrylic glass
- Large observation field
- Telescopic pole
- Can be equipped with a lamp

Post

For permanently mounting traffic mirrors.

Steel pipe 60/2 mm or 76/2.5 mm, hot-dip galvanized. With plastic cap.

For embedding in concrete (with ground anchor).

Universal Clamp adapter

With the universal mount, attachment to posts of various diameters is possible.

Easy installation:

Mount adapter with hose clamps (provided by the customer) on the post and attach the mirror with 76 clamp to the adapter.

Wall arm

Wall arm for mounting on vertical surfaces.
Mirror can be mounted in both landscape and portrait formats.

Version: for clamp 76 mm Ø

Mounting plate: 160 x 140 x 10 mm

Wall/Ceiling post

For attachment to horizontal surfaces, e.g. walls, ceilings, etc.

Execution: for clamp 76 mm Ø

Mounting plate: 160 x 140 x 10 mm

Fork attachment

For the simultaneous attachment of 2 mirrors.

Function: The attachment is screwed onto the end of a 76 mm pipe post through a welded 90 mm pipe piece (also possible with wall arm or wall post).

Execution: for clamp 76 mm Ø

A photograph of a yellow bumper protection railing in an industrial setting. The railing is made of heavy-duty yellow metal beams and is mounted on a concrete floor. In the background, there are white walls, a door with a 'Heizung' (Heating) label, and a red fire extinguisher. Two people are visible in the distance.

Bumper protection

HIGHEST PROTECTION FOR TRAFFIC ROUTES AND OPERATIONAL FACILITIES

Our bumper protection solutions, including the successful brand BLACK BULL, provide reliable protection for a variety of applications. From railings, protective grids, and bollards to impact protection, brackets, barriers, as well as column and pipe protection systems – our products optimally secure traffic routes and operational facilities. Our offering is complemented by suitable fastening accessories that ensure maximum stability on various surfaces.

Railings	24
Protective grids	34
Planks	35
Bollards	40
Brackets	42
Impact protection	55
Barriers	63
Column and pipe protection	67

What makes the BLACK BULL impact protection railing so unique?

The material: steel!

BLACK BULL quality steel stands for safety, as it absorbs enormous forces. If the impact protection system is overloaded, the steel deforms, but the system itself remains intact except for the deformation.

Plastic, on the other hand, stretches or compresses under load. This creates invisible weak points with an increased risk of breakage. BLACK BULL quality steel does not break, does not splinter, and does not become brittle.

Environment:

Steel is ecologically harmless, sustainable, and can be returned to the recycling loop in a pure form without elaborate processing.
Touching the elements does not produce abrasion in the form of microplastics.

The shaping

Square stand posts and cross beams absorb significantly more force than comparable round tubes. The energy is absorbed over a larger area instead of linearly and is distributed better.

The innovative technology "Floor Protection"

The patented spring element made of PU acts like a crumple zone due to the pre-loaded force absorption. This protects the floor and prevents pulled-out fastenings.

The TÜV certification

Tested according to the latest standards and in accordance with the currently valid DGUV 208-061. The tests of the BLACK BULL impact protection systems were carried out according to the strict requirements of TÜV, which also supervises the execution. (Some manufacturers only conduct in-house tests under optimized conditions.)

The force absorption - variable depending on the situation • Single-stage:

Steel posts firmly anchored = rigid, clear delineation of the area to be protected

• Two-stage:

Steel post + spring element = impact protection system SWING

Yielding railing and crumple zone effect: The occurring force is first reduced by the spring element and thus mitigated before being transmitted to the system.

• Three-stage:

Steel post + spring element + plastic cross beam = impact protection system hybrid

Double crumple zone effect: The occurring force is first absorbed by the plastic cross beams – up to the maximum deflection. After that, the already reduced force is further mitigated by the spring elements and the remaining energy is transmitted to the system.

The variants of the BLACK BULL impact protection systems (railing and plank) can thus be individually adapted to the situation on site. From hard separation of individual areas to ground-friendly, flexible applications.

BLACK BULL Ram protection railing S-Line

Robust protective railings made of profile steel for indoor and outdoor use. Clearly separates and cost-effectively manages traffic routes (pedestrian and light forklift traffic), protects work areas, inventory, and buildings.

- Variable system with upright posts and cross beams
- Compact dimensions
- Quick, easy assembly
- Form-fitting: no protruding tabs or screws
- Durable: Many plastics become brittle – steel does not

Surface treatment:

- For outdoor use: hot-dip galvanized and yellow plastic-coated
- For indoor use: yellow plastic-coated

Stand post: 3 mm wall thickness, black cap
Base plate: 140 x 160 x 10 mm
Cross beam: 60 x 40 mm, 3 mm wall thickness

Note:

Practical adapter for seamless installation directly on the wall

Mounting: for bolting down

Drilling hole: Ø 14 mm
Underbody protection angle made of steel, yellow coated. Prevents the dangerous threading of the forklift forks. Wall thickness 4 mm, height 200 mm.

- For indoors and outdoors
- Robust steel railing
- Customizable based on the object
- Easy installation
- TÜV certified according to DGUV 208-061

Note:

Also available as a flexible version SWING: Gives up to 10° inclination. Spring element and mounting set see p. 28.

BLACK BULL Railing Door

MADE IN
GERMANY

Railing door made of steel with welded protective cover for increased stability, better visibility, and for applying warning signs.

Coordinated with the robust bumper protection railing XL-Line (p. 26/27) and the slimmer railing S-Line

(p. 24/25). The door is identical for both railing systems, only the fastening material is different.

Two mechanisms:

- Manually opened and closed. No special post required – door fits all post variants.

- Self-closing with gas spring. Separate mounting post required (see table). The unique, newly developed fitting technology makes the railing door very versatile in application. Selectable on site:

- Post stop right or left
- 90° opening inwards or outwards

Note:

All models are additionally available in hot-dip galvanized version upon request.

Surface treatment:

yellow plastic coated

Door: 835 x 475 mm

Door with fittings: 905 x 520 mm

Frame profile: 60 x 30 mm
2 mm wall thickness

Protective cover: 250 x 355 mm

U-shaped steel bolt with plastic handle

The U-bolt effectively prevents unwanted swinging when installed as a double door, providing additional safety and stability.

Dimensions: 250 x 60 x 40 mm

Note:

Suitable for all BLACK BULL railing doors

NEW

- Made of steel
- Self-closing or manual
- 90° opening

Door (without fitting): 835 x 475 mm

Door with fitting: 905 x 520 mm

Frame profile: 60 x 30 mm

Protective cover: 250 x 355 mm

BLACK BULL column protection hybrid

Optimal combination of steel and plastic for the protection of all types of columns.

The firmly anchored stand posts made of quality steel and the yielding cross beams made of special plastic ensure both stable protection and dynamic force absorption when approaching.

Surface:

Post: Steel, black coated, yellow cap
1,000 x 100 x 100 mm

Cross beam: special plastic, yellow dyed 74 x 52 x 5 mm

Suitable for rectangular posts from 200 to 700 mm. The cross beams are 1,000 mm long and can be adjusted on site. Assembly instructions and drilling template included in the delivery.

Other beam dimensions on request.

- Combination of steel and plastic
- Highly loadable
- Suitable for wide columns
- Customizable

The best of both worlds:
Combines the advantages
of steel and plastic.

The vertical posts of most plastic railings require steel plates with welded stubs for stable attachment. In other words: When it "counts", the plastic post uses robust metal elements. On the other hand, with steel railings, the handrail hardly yields under force.

The solution: A hybrid railing that unites steel and plastic. Consisting of yielding vertical posts made of steel and yielding cross beams made of plastic.

The cross beams
can be adjusted
on site.

The vertical posts are equipped with a PU spring element and yield up to 10° (approximately 175 mm). The cross beams are made of a special polypropylene with particularly high resistance to material fatigue.

Result: A robust, flexible impact protection railing for indoor and outdoor use. For the highest loads. To be bolted down. Self-adjustable – saw and drill template see accessories.

Surface treatment:

- For outdoor use:
Posts hot-dip galvanized and black plastic coated
- For indoor use:
Posts black plastic coated

Stand post: 3 mm wall thickness
Base plate: 200 x 200 x 10 mm

For bolting on.

- Massive steel elements for maximum load capacity
- Innovative connection technology for 1-man assembly
- Individually, object-related adjustable and extendable

Stand post: 465 x 80 x 80 mm
3 mm wall thickness cap black

Base plate: 160 x 140 x 10 mm
drill hole: mmØ 14 mm

Guard rail: C-profile, 100 x 40 mm, 3 mm wall thickness

Surface treatment:

- For outdoor use: galvanized and yellow plastic coated

- Option: only galvanized
- For indoor use: yellow plastic coated

Easy assembly:
Bolt down the post, screw the rail (C-profile) to the post using a connecting element.

Rigid corner boards allow for a 90° angle.

Alternatively: corner board joint for angle adjustment between 90° and 180°

The Rammschutz-Planke XL protects machines, conveyor technology, and work areas from typical collision damage caused by forklift and maneuvering traffic. Massive steel posts combined with four C-profiles provide extensive protection without obstructing the view. Adjustable as a stretch or rectangle at any angle between 90 and 180°.

Stand post: 1,000 x 80 x 80 x 3 mm, black cap, with fittings for 4 boards
Base plate: 200 x 200 x 10 mm
Protection board: C-profile, 100 x 40 x 3 mm, four different lengths

Surface treatment:

- For indoor use: yellow plastic-coated
- For outdoor use: hot-dip galvanized and

yellow plastic-coated Option: only hot-dip galvanized

Mounting:

For doweling drill hole: Ø 14 mm

Easy assembly: dowel the stand post, screw C-profiles to the post using connecting elements.

Rigid corner planks allow for a 90° angle.

Alternatively: corner board joint for angle adjustment between 90° and 180°

End corner C-profile 45°

Also available as a flexible version SWING: gives up to 10° inclination. Spring element and mounting set see p. 28.

More mobility and mechanical decoupling of individual railing sections through the construction as a SWING variant.

- Maximum load capacity through massive steel elements
- Extra high with 1,000 mm
- Object-specific adjustable and expandable
- Quick, easy installation
- For screw mounting

Extension set: A maximum of one extension set can be used per plank.

BLACK BULL Impact protection bollard

* Max. power absorption;
For details, please request the data sheet.

Extremely durable bollard made of quality steel. Effectively prevents impact damage, secures inventory, traffic routes, and work areas. Protects machines, pillars, (roll) gates, loading ramps, etc.

Impact protection bollard S for bolting, additionally equipable with a flexible PU spring element (see page 28).

The impact protection bollards L to 3XL are particularly suitable for critical application areas: truck and forklift traffic, driveways, building corners.

The XXL and 3XL versions can additionally be filled with concrete: The cap is placed on afterwards.

Surface treatment:

Yellow plastic-coated, with black painted stripes (S and L) Hot-dip galvanized and yellow plastic-coated, with black painted stripes
Option: hot-dip galvanized and white plastic-coated, with red painted stripes

Mounting options:

For concreting or for doweling

All sizes (except XXL and 3XL) can also be removable and/or lockable with a triangular or cylinder lock (from 159 mm with lifting aid).

*tested variant by TÜV

BLACK BULL Ram protection post SWING

The internal steel spiral spring absorbs the impact forces (progressive force absorption) in conjunction with the elastic buffer made of polyurethane. Minimizes damage to the bollard and the vehicle (forklift, truck). Protects roll-up and fire protection doors, transitions on driveways, ramps, access roads. The flexible bollard made of quality steel tilts up to a maximum of 25° (approximately 310 mm) and automatically returns to the starting position.

Execution: Ø 159 mm
4.5 mm wall thickness Base plate: 270 mm Ø x 10 mm

MADE IN
GERMANY

- For indoors and outdoors
- Made of quality steel
- Spring-loaded
- Energy absorbing
- Minimizes damage

Surface treatment:

- For outdoor use: galvanized and yellow plastic-coated, with black signal stripes
- For indoor use: yellow plastic-coated, with black signal stripes

The bollard is to be bolted down – optionally with a ground tube for concreting.

Execution	Dimensions (mm) H x Ø	Shipping weight kg/piece	Article	€/piece

hot-dip galvanized and plastic coated			199.27.906	

You need 4 fasteners. You can find suitable material on pages 74/75.

BLACK BULL Ram protection post SWING rotatable

Technically based on the yielding impact protection bollard SWING. Additionally rotatable due to a massive steel base plate with six embedded ball bearings.

The forces acting are thus absorbed doubly: lateral forces by rotation and frontal forces by the yielding of the bollard. Reduces damage to a minimum. Protects roll and fire protection gates, transitions on driveways, ramps, etc.

The flexible bollard made of quality steel tilts up to a maximum of 25° (approximately 310 mm) and automatically returns to the starting position.

MADE IN
GERMANY

- Optionally for indoors or outdoors
- With shipping-optimized base plate
- Large selection of heights and widths

BLACK BULL
Bumper guard M

Bumper guard with a diameter of 60 mm

The ideal protection specifically designed for areas where mainly hand pallet trucks and light industrial trucks are used. The slimmer design offers robust protection and effectively prevents damage to building structures or machines.

Outstanding price-performance ratio.

Optimized size:
Perfectly suitable for areas where conventional 76 mm guards would be oversized.

Reliable protection:
Robust protection against impacts and damage

Versatile application:
Ideal for warehouses, logistics centers, and production halls

Note:
This impact protection bracket combines efficiency and space savings with high resistance and is the ideal solution for areas with lower risk.

BLACK BULL
Bumper Bracket M
with underride protection

MADE IN
GERMANY

Max. power consumption;
For details, please request the data sheet.

Highly resilient protective frame made of quality steel for indoor and outdoor use with integrated underrun protection.

The underrun protection reliably prevents the penetration of forklift forks and thus protects sensitive components below the impact protection from damage.

Design: Ø 60 mm wall thickness: 2 mm base plate: 70 x 160 x 10 mm drill hole: Ø 14 mm

Underbody protection:
Height 150 or 400 mm x 4 mm

Surface treatment:

- For outdoor use: hot-dip galvanized and yellow plastic-coated, with black signal stripes
- For indoor use: yellow plastic coated, with black signal stripes

The impact protection brackets with underbody protection are to be bolted down. Available for embedding in concrete upon request.

- Integrated underrun protection
- Highly load-bearing
- Absorbs strong shocks reliably
- TÜV certified according to DGUV 208-061 • optionally for indoor or outdoor

BLACK BULL Corner Bumper Guard Bar M

Three-legged "Corner Variant" of the 60s Bumper Guard Bar M.

Secures particularly important or sensitive facilities (e.g. pillars, stubs, columns, pipes, building parts, etc.). High protection of inventory, work, and traffic areas.

Version: Ø 60 mm Wall thickness: 2 mm Side length: 500 mm Base plate: 70 x 160 x 10 mm Drill hole: Ø 14 mm

The corner impact protection frames M are to be anchored.

Available for embedding on request.

- MADE IN GERMANY**
- Protects corners
- High-quality steel
- Highly loadable
- Absorbs strong impacts reliably
- Optional for indoors or outdoors

Surface treatment:

- For outdoor use: hot-dip galvanized and yellow plastic-coated, with black signal stripes
- For indoor use: yellow plastic-coated, with black signal stripes

BLACK BULL

BLACK BULL Corner Bumper Guard Bar M with Underride Protection

Highly loadable protective frame made of quality steel for indoor use with integrated underrun protection and three stable base plates.

The underrun protection reliably prevents the penetration of forklift forks and thus protects sensitive components below the impact protection from damage.

Execution: Ø 60 mm Wall thickness: 2 mm Base plate: 70 x 160 x 10 mm Drilling hole: Ø 14 mm Underride protection: Height 150 or 400 mm x 4 mm

The corner impact protection arch M with underride protection are to be anchored. Available for embedding in concrete upon request.

- MADE IN GERMANY**
- Integrated underrun protection
- High-quality steel
- Highly loadable
- Absorbs strong impacts reliably
- Optional for indoors or outdoors

Surface treatment:

- For outdoor use: hot-dip galvanized and yellow plastic-coated, with black signal stripes
- For indoor use: yellow plastic coated, with black signal stripes

GERMANY

- For indoors
- High-quality steel
- Removable
- Easy assembly/disassembly

Installation: The two solid steel plates are bolted down. The separate pipe bracket is inserted, pushed back, and fixed. Additionally, a fitting is placed that covers the inlet opening and protects against dirt.

Surface treatment:
yellow plastic coated, with black signal stripes

BLACK BULL impact protection bar with underride protection

- For indoors
- High-quality steel
- Additional steel plate
- Withstands hard impacts

High-load protective frame made of quality steel for indoor use with integrated underrun protection.

Prevents the dangerous threading of the forklift forks into shelf areas or other protected facilities.

With 4 mm thick steel plate. For bolting.
Execution: Ø 76 mm
3 mm wall thickness Base plate: 160 x 140 x 10 mm
Drilling hole: Ø 14 mm

Height of the underrun protection:
150 or 400 mm

BLACK BULL Bumper protection brackets SWING

More info about the product:

The standard version of the Black Bull bumper protection brackets is equipped with additional polyurethane spring elements. The UV-resistant and permanently elastic PU element absorbs the forces acting on the brackets.

- Yielding, flexible protective bracket
- Inclination: maximum 10°
- Minimizes impact and repair damage
- No torn-out dowels

Execution: Ø 76 mm
3 mm wall thickness Base plate: 160 x 140 x 10 mm

Maximum inclination:
55 mm at a height of 390 mm
95 mm at a height of 640 mm
190 mm at a height of 1,240 mm

Surface treatment:

- For outdoor use: hot-dip galvanized and yellow plastic-coated, with black signal stripes
- For indoor use: yellow plastic-coated, with black signal stripes

Mounting with composite anchors (accessories: set for 8 drill holes) can be retrofitted: already installed impact protection brackets can be retrofitted - re-drilling is necessary.

BLACK BULL Ram protection bar XL with underrun protection

BLACK BULL

MADE IN
GERMANY

* Max. power consumption;
for details please request data sheet.

Extremely durable protection bar made of quality steel for indoor and outdoor use with integrated underrun protection.

The underrun protection reliably prevents the penetration of forklift tines and thus protects sensitive components below the ram protection from damage.

Execution: Ø 108 mm
3.6 mm wall thickness base plate: 200 x 140 x 10 mm
Drilling hole: Ø 18 mm

Height of the underrun protection:
250 or 500 mm

Surface treatment:

- For outdoor use: hot-dip galvanized and yellow plastic-coated, with black signal stripes
- For indoor use:
yellow plastic-coated, with black signal stripes

The XL impact protection brackets with underrun protection are to be anchored. Available for embedding in concrete upon request.

Maximum stability through Z-bending of the 4 mm thick steel plate.

BLACK BULL Bumper protection

MADE IN
GERMANY

Bumper protection elements are required for stationary shelves in connection with forklifts, provided they are not track-bound.

Protects shelf supports in corner and passage areas.

Also usable as bumper protection for storage facilities, machine grids, partition wall systems. For bolting. Drill hole: Ø 14 mm

Design according to safety guideline DGUV rule 208-061 and ASR A1.3/5.2. Complies with DIN EN 15512.

Variants:

- Angle: two-sided protection
- U-profile: three-sided protection

Surface treatment:

yellow plastic-coated, with black signal stripes

Note:

According to DIN EN 15512, a height of 400 mm for the impact protection is required.

Execution	Number of required dowels	Dimensions (mm) H x SL x Thickness 400 x 160 x 5	Shipping weight kg/pc.	Article	€/piece.

You need 4 or 6 fastening elements. You can find suitable material on pages 74/75.

- i**
- For indoors
 - Floor-friendly
 - Highly load-bearing
 - Strongly damping
 - TÜV certified according to DGUV 208-061

BLACK BULL Bumper protection SWING

MADE IN GERMANY

Extremely load-bearing impact protection angle made of steel, equipped with an additional damping element made of polyurethane. The stable PU element with lateral protective edges absorbs impact forces and protects the floor.

Impact protection angle yellow plastic-coated with black signal stripes for indoor use.

The black damping element is UV-resistant and permanently elastic.

- No torn dowels
- Minimizes impact damage
- Inclination: approx. 45/90 mm
- Angle of inclination: 6.5°

More info about the product:

Easy installation:

Align impact protection angle and 30 mm high damping element (total height 430/830 mm) and anchor it.

Surface treatment:

yellow plastic-coated, with black signal stripes

Retrofit:

Already installed BLACK BULL impact protection corners can be retrofitted – re-doweling is necessary.

Angle with damping element	Number of required dowels	Dimensions (mm) (H x SL x thickness)	Shipping weight kg/pc.	Article	when purchasing at €/piece.
Angle 400	4	430 x 160 x 5	8.5	197.25.180	
Angle 800		830 x 160 x 6	16.5	197.25.566	

Mounting set (for 8 drill holes)

You need 1 mounting set.
You can find suitable material on pages 74/75.

Bumper protection

BLACK BULL bumper protection with guide roller

Bumper protection elements are required for stationary shelves in connection with forklifts, provided they are not track-bound.

The vertically fixed roller redirects a large part of the laterally incoming forces. It increases the lifespan, dampens, and reduces shocks. It is gentle on the floor. Thus, it optimally protects shelf supports in corner and passage areas.

For doweling. Drill hole: Ø 14 mm.
Polyamide roller: 110 mm high, black.
Installation: 75 mm above the floor.

Surface treatment:

yellow plastic-coated, with black signal stripes

MADE IN
GERMANY

- For indoors
- Solid steel
- Indestructible
- With 1 or 2 guide rollers

Variants:

- Angle:
two-sided protection with 1 guide roller • U-profile:
three-sided protection with 2 guide rollers

Design according to safety guidelines
DGUV rule 208-061 and ASR A1.3/5.2.

BLACK BULL guide board

- For inside
- Solid steel angle
- Protects restricted areas
- Two wall thicknesses

Often, storage, fire protection doors and gates are damaged. Cause: Pallets/grid boxes were placed in the blocking area in the reversing area. Damage can also be caused by forklift drivers entering these areas while the gate is opening.

This massive steel angle for bolting secures critical restricted areas and avoids costly repairs. With rounded corners and miter cut (45°) for angle mounting. Drill hole: Ø 14 mm.

Surface treatment:

yellow plastic-coated

MADE IN
GERMANY

Bumper Post FLEX

Proven material in a new application: Yielding posts made of high-quality plastic (TPU). Flexible yet still shape-stable.

Due to the classic design, the bumper post FLEX looks like a conventional steel post, whose yielding property is only noticeable upon impact.

Absorbs impact forces, protects vehicle and bollard. Particularly suitable in narrow traffic areas.

Mounting type: for doweling
Base plate: 140 x 140 x 25
Drill hole: mm Ø 14 mm

**Note:**

TPU = Thermoplastic Polyurethane. Environmentally friendly and biodegradable.

- Made of flexible plastic
- Yielding
- "Steel Post Look"
- Two colors

MORION Impact Protection Plastic

Start protection element made of yellow, high-quality polyethylene (MDPE) for the protection of shelf supports. Additionally secured by two Velcro straps – prevents unwanted slipping.

- For shelf supports from 60 to 120 mm
- Protects the floor, as it is not doweled
- Recyclable

Quickly assembled and disassembled (e.g. for annual shelf inspection).

- Elastic, spring-back
- Shape-stable
- Assembly without tools
- TÜV certified according to DIN EN 15512
- Fixation by Velcro

**Note:**

According to DGUV Regulation 208-061, impact protection elements that are connected to the shelf support must not be used in corner areas or passages. Here, I recommend steel impact protection angles for bolting.

double shelf Set A 2.300	12	465 x 2.300 - 2.700 x 160	58	198.22.991	

You need 4, 8, or 12 fasteners. You can find suitable material on pages 74/75.

- For indoors
- Made of steel
- Height of bumper protection angle 500 mm
- For all shelf widths
- Width adjustable
- Easy assembly
- TÜV certified according to DGUV 208-061

BLACK BULL shelf protection plank B

MADE IN
GERMANY

The shelf protection plank made of steel is specially developed for the frontal protection of shelves and shelf supports against impact damage from forklift and maneuvering traffic.

The special design of the impact protection angles protects the front shelf posts and allows the lateral insertion of two steel planks (C-profile). The 300 mm wide protective angles allow for shifting of the planks by up to 200 mm per protective angle. Thus, each plank set can be individually adjusted in width up to 400 mm. Black stripes increase visibility.

A plank set B consists of two impact protection angles (H x W x D

500 x 300 x 190 mm, 4 mm material thickness), two planks (C-profile, 100 x 40 x 3 mm) and four clamping pieces.

Surface treatment:

yellow plastic-coated, with black signal stripes

Easy assembly: Bolt the approach protection angle, insert both planks, bolt the second protective angle, and secure the planks with clamping pieces.

Single shelf set B 900

- for widths from 900 to 1,300 mm

Double shelf set B 1,700

- for widths from 1,700 to 2,100 mm

Double shelf set B 2,300

- for widths from 2,300 to 2,700 mm

Variant with additional guide rollers. Diverts a large part of the laterally incoming forces. Dampens impacts, protects the floor, and increases the lifespan.

Execution	Anzahl/erford. Dowels	Dimensions (mm) H x W x D	Shipping kg/pc.	Article	€/pc.
Set B 900	12	500 x 900 – 1,300 x 190	32	198.23.925

BLACK BULL Shelf protection plank C

MADE IN
GERMANY

The shelf protection plank C serves to protect the front side of shelves and shelf supports. Combination of impact protection angles made of steel and two planks made of plastic.

Provides firm protection for the shelf supports, while the spring-loaded planks forgive minor maneuvering errors.

The outer side of the impact protection angle is extra long to additionally protect the shelf post. On the other side of the angle, the shelves are inserted and secured.

Impact protection angle

(H x W x D): 400 x 300 x 190 mm
Wall thickness: 3 mm
Plank (H x D x WS): 74 x 52 x 5 mm

Three variants cover shelf widths from 900 mm to 2,700 mm.

Execution	Dimensions (mm) H x W x D	Shipping weight kg/pc.	Article	€/pc.
Set C 900	400 x 900 - 1.300 x 190	18	198.23.829

BLACK BULL Bumper Protection Barrier

MADE IN
GERMANY

Guidance system made of steel. For separating traffic routes, protecting against damage to walls, machines, technical facilities, and delineating work areas.

Very robust construction: The thick-walled steel pipe is connected by metal struts with a solid base plate. Side closures with black plastic caps (optional).

Two application types: As a single barrier or in continuous construction using an adapter that connects the pipes together.

Integrated cable holder: Protects cables, pressure hoses, lines up to 48 mm, which can be guided through the cutouts of the webs.

Also available as a flexible version SWING (see page 35)

Surface treatment:
yellow plastic-coated

Execution: Ø 76 mm
3 mm wall thickness Total
height: 200 mm Base plate
160 x 140 x 10 mm

The bumper barriers are anchored with dowels. Drill hole: Ø 14 mm.

Special lengths are available on request.

Version		Number of required dowels	Dimensions (mm) H x L x D	Shipping weight kg/pc.	Article	€/piece

MORION column protection

MADE IN
GERMANY

Optimal all-round protection for columns, posts, pillars, (light) masts, etc. against collision damage.

Two-part steel pipe construction made of 60 mm round arches and 48 mm cross braces.

Simple assembly:

Both cross braces are inserted into each other and form a solid, stable unit, which is anchored with 4 base plates.

Surface treatment:

- hot-dip galvanized
- hot-dip galvanized and yellow plastic-coated, with black signal stripes
- only plastic-coated for indoor use

Execution: Ø 60 mm/48 mm
2 mm wall thickness Base plate: 160 x 70 x 10 mm
Drilling hole: Ø 14 mm

The column protection is for anchoring - optionally with a counter plate for concreting.

MORION column protection
Plastic ECO

Simple, effective protection of rectangular columns against impact damage. Particularly suitable when full surface wrapping of the column is not necessary.

Consists of four identical side parts that are plugged together and fixed with the supplied screws. The adjustment to different column sizes is done by simply cutting the cross beams on site. The cross beams are already provided with scales at a distance of 50 mm.

Made of modified, yellow-colored polyethylene.

Suitable for columns with a side length of 200 mm to 700 mm.

Floor-friendly: No need for doweling, as it is directly connected to the column in a form-fitting manner.

Execution	Column size (mm)	External width (mm)

MORION column protection

Plastic

Perfect protection of rectangular columns against impact damage from forklifts, industrial trucks, or lorries.

The side parts of the four individual elements can be pushed into each other and cover all column diameters from 200 x 200 mm to 300 x 300 mm, including rectangular sizes (e.g. 200 x 300 mm).

Made of modified, yellow-dyed polyethylene for particularly high load capacities.

Two tension straps (each 220 cm) ensure a firm connection.

Extension element for expanding column protection by 200 mm each. Thus suitable for column diameters up to 600 x 600 mm. Longer straps (each 400 cm) necessary.

Version	Column size (mm)	External width (mm)
Column protection	min. 200 x 200 max. 300 x 300	min. 450 x 450 max. 550 x 550

PROline-thermo Thermoplastic road marking

Preformed thermoplastic mass for perfect, permanent, and sharp-edged marking of lines, symbols, letters, numbers, and traffic signs on roads.

The white reflective marking adheres to almost all floors, e.g. concrete, asphalt, tar, composite paving, and tiles. It can be driven over after just 30 minutes. Lasts 5 times longer than floor marking paint.

An optimal adhesion on critical substrates is achieved by using a primer.

Installation instructions:

- Align form elements on the dry, dust and grease-free substrate.
- Joints between the elements should be smaller than 5 mm.
- Fragments (e.g. from transport) can be easily integrated through the melting process.
- In cold weather: Preheat the substrate with a gas burner.

Only one person and a gas burner are required for installation.

Other colors available upon request (e.g. yellow).

Anti-slip products

- i**
 - For indoors and outdoors
 - Self-adhesive
 - High abrasion resistance
 - Temperature resistant
 - Easy to install

PROline anti-slip covering

MADE IN
GERMANY

Self-adhesive anti-slip covering with coarse surface, strong adhesive, and excellent abrasion resistance: 1 million steps. High slip resistance – slip factor R13 (DGUV rule 108-003, previously BGR 181).

For walkways, stairs, entrances and exits, ramps, ladders, vehicles.

- Self-adhesive – easy to install
- Chemical and mineral oil resistant
- UV-stable: suitable for outdoor use
- Temperature range: -40 to +80 °C

Roll goods: Length 18.3 with prefabricated cutouts

Note:
For wet rooms and outdoor use, edge sealing is necessary.

PROline anti-slip coating deformable

Self-adhesive anti-slip coating on flexible aluminum carrier for structured surfaces.

Coarse surface, strong adhesive, and high abrasion resistance. Slip-resistant: Slip factor R13 (DGUV rule 108-003, previously BGR 181).

For uneven, rough or profiled surfaces (e.g. ribbed, corrugated sheets, ladder steps).

- Self-adhesive – easy to install
- Chemical and mineral oil resistant
- UV stable: suitable for outdoor use
- Temperature range: -20 to +60 °C

Roll goods: Length 18.3 m

Recommendation: Installation with rubber mallet or pressure roller

PROline anti-slip angle made of fiberglass

Anti-slip angle for stairs. Made of fiberglass reinforced special plastic (GFRP). Excellent abrasion resistance: 5 million steps. High slip resistance – slip factor R13 (DGUV Rule 108-003, previously BGR 181).

The corners can be screwed onto all substrates (holes to be drilled individually) or glued (structural adhesive to be ordered). Consumption: 350 ml for about 10 m (at 6 mm thickness).

- Easy to lay
- Chemical and mineral oil resistant
- UV stable, non-conductive, flame retardant
- Temperature range: -20 to +120 °C
- Material thickness 3.8 mm

Floor marking

- For internal company areas
- Extra strong
- Residue-free removable
- In various colors

Note:

ASR A1.3

Markings of traffic routes

"The marking of traffic route boundaries must be colorful, clearly recognizable, and continuous. If the marking is applied to the ground, this can be achieved, for example, by using stripes at least 5 cm wide in a highly visible color – preferably white or yellow – with sufficient contrast to the color of the ground surface."

PROline-tape Self-adhesive Floor marking

More info
about the
product:

The extra strong floor marking tape made of high-quality vinyl for internal areas. With this, you can mark paths, roadways, and other boundaries precisely and cleanly.

PROline tape can be removed residue-free from most floors and is therefore particularly suitable for short- and medium-term measures.

Execution:

Tape length: 33 m

Widths: 50 and 75 mm
With the TAPEliner – the tape dispenser – you can mark comfortably and effortlessly.

TIP:

Only compatible with the PROline tapes on page 83

Floor marking

- For indoor and outdoor use
- Highly opaque, durable
- Quick-drying
- Abrasion-resistant, chemical-resistant
- Easy to use
- Available in various colors

PROline-paint

Line marking paint

With the PROline-paint marking system, you can mark quickly and effortlessly in indoor and outdoor areas.

PROline-paint line marking paints are highly opaque, abrasion-resistant, chemical-resistant, and adhere to practically all surfaces, e.g. concrete, asphalt, tar, metal, tiles.

Durable and economical marking in large cans of 750 ml. Depending on the substrate and line thickness, one can can perfectly mark 50–90 m with a line width of 50 mm.

Quick-drying – walkable after just a few minutes.

Note:

PROline-paint line marking paint is not compatible with PROline-paint indoor marking paint and PROline-paint outdoor marking paint.

PROline-paint marking devices are track-safe and easy to use: shake the can – insert – drive the marking line – done.

By removing the rear wheels, marking close to walls, shelves, etc. is made possible.

PROliner

The easy-to-use mechanism allows for any line width between 50 and 75 mm to be set.

ROADliner

Same advantages as the PROliner. With two cans of paint, any line width between 100 and 130 mm can be achieved.

HANDliner

Facilitates spraying for marking or labeling work by hand.

PROline-paint marking set – consisting of PROliner, two cans of paint (white or yellow) and chalk line.

PROline-paint stencil set made of durable plastic, consisting of letters and numbers.

TIP:

When marking plastic floors or floors sealed with plastic, we recommend a test regarding compatibility, drying time, and adhesion of the paint.

 - Silicone-free
 - High coverage, quick-drying
 - Various colors

PROline paint
Hall marking paint

MADE IN
GERMANY

Extremely durable and resistant one-component paint for indoor use.

For heavily used industrial and workshop floors, storage and sales areas, etc.

Adheres to concrete, asphalt, screed, composite stone, and open-pored tiles.

TIP:
For coated substrates (e.g. epoxy floors), we recommend a compatibility test for the drying time and adhesion of the paint.

Easy to process. Application of paint using a roller (for larger areas), brush, or spray method.

- PROline-paint hall marking paint is:**
- Highly opaque and quick-drying
 - Dirt-repellent, easy to clean
 - Very durable and long-lasting
 - Silicone-free
 - Largely resistant to oil, solvents, and cleaning agents
 - Suitable for forklifts
 - Decorative

Consumption:
5-liter container for approximately 20 to 25 square meters with one coat.

(Tip: Depending on the floor condition, we recommend 2 coats.)

PROline paint
2K hall coating

MADE IN
GERMANY

Extremely durable, resistant, water-based two-component paint. For coating industrial floors indoors.

PROline-paint 2K hall coating is mechanically significantly more load-bearing and chemically more resistant than comparable one-component paints. For heavily used industrial and workshop floors, storage and sales areas, etc.

Adheres to concrete, coated floors, asphalt, screed, composite stone, and open-pored tiles. Easy to process. Color application using a roller or brush.

TIP:

For coated substrates (e.g. epoxy floors), we recommend a compatibility test for the drying time and adhesion of the paint.

PROline-paint 2K hall
coating is:

- Very resistant and durable
- High opacity and quick-drying
- Suitable for forklifts
- Dirt-repellent, easy to clean
- Silicone-free
- Largely resistant to oil, solvents, and cleaning agents
- Decorative

Consumption:

5-l container (3.9 l paint + 1.1 l hardener) for about 20 to 25 sqm with one coat. (Tip: Depending on the floor condition, we recommend 2 coats.)

2K deep primer

Solvent-free, colorless primer for pre-treatment of mineral and highly absorbent substrates (e.g. open-pored concrete floors).

Consumption: 4.8-l container for about 40 sqm

- Suitable for forklifts
- Durable and long-lasting
- Silicone-free
- High coverage, quick-drying
- Abrasion-resistant, chemical-resistant

PROline paint
Anti-slip hall marking paint

MADE IN
GERMANY

Same properties as PROline-paint hall marking paint, but additionally with fine quartz granulate.

Provides a rough, supportive, slip-resistant surface indoors. Slip resistance R10 (DIN 51130/BGR 181).

For heavily used industrial floors. Adheres to concrete, asphalt, screed.

Easy to process: stir the paint and apply with a paint roller or brush. Consumption: 5-liter container for approx. 20 sqm with one coat.

(Tip: Depending on the floor condition, we recommend 2 coats.)

Note:
Also suitable for outdoor use.

TIP:
For coated substrates (e.g. epoxy floors), we recommend a compatibility test for drying time and adhesion of the paint.

PROline-paint
External marking paint

MADE IN
GERMANY

High-quality, single-component marking paint with extremely low abrasion. Specifically designed for operational and local area marking of surfaces and stripes. For repairing local road markings.

Adheres to concrete, screed, asphalt, and paving stones. Easy to process. Application of paint using a roller (for larger areas), brush, or spray method.

PROline-paint external marking paint is:

- Highly abrasion-resistant
- Quick-drying and highly opaque
- Excellent adhesion
- Very resilient and durable
- Largely resistant to oil
- Silicone-free

Consumption: 5-liter container for approximately 25 sqm with one coat. (Tip: Depending on the surface condition, we recommend 2 coats.)

Ground stencil E-parking lot
Ground stencil made of reinforced special cardboard with E-car pictogram. For spraying with PROline-paint spray paint or for rolling the paint. Reusable.

Floor marking

PROline-tape vinyl forklift suitable floor marking

Especially strong floor marking tape (1000 my) made of high-quality vinyl for internal areas. For precise and permanent marking.

PROline-tape vinyl is strongly adhesive, durable, and long-lasting. Can be driven over by pallet trucks, forklifts, and cleaning machines. (Rotational movements of warehouse vehicles on the tape should be avoided.)

Execution:

Tape length: 25 m
Widths: 50 and 75 mm

With anti-slip embossing – R10

TIP:
According to ASR A1.3 Section 5.2, permanent obstacles or danger spots are marked in yellow-black and temporary obstacles or danger spots are marked in red-white.

Warning marking self-adhesive

Accidents often occur because danger spots, bump and trip edges were not marked immediately.

Self-adhesive warning tape, quick to apply and inexpensive. Adheres to smooth, dust-free surfaces. Firm, permanently adhesive and safe – yet removable if necessary.

Non-reflective

Inexpensive, self-adhesive warning tape for quick marking indoors. Good warning effect during the day.

Retroreflective

High-quality and durable self-adhesive warning tape for permanent marking indoors and outdoors. UV resistant. Very good warning effect in all lighting conditions.

Long-lasting glow-in-the-dark

High-quality adhesive tape for permanent marking indoors. For passages, escape routes, and walls (as part of a safety system according to DIN 67 510). Dangerous installations, obstacles, or stairs are recognizable even in darkness and smoke. Long-lasting glow-in-the-dark framed safety installations and emergency exits are clearly visible even from a great distance.

Floor repair

Restore floor repair

A repair mixture for three different substrates: concrete, (cast) asphalt, screed

Extremely durable and resistant three-component mixture with fast-reacting binder for short curing times.

Freely moldable. For repairing unevenness, holes, and large cracks. Also for shaft renovation. Also for height adjustment, for designing ramps, loading aids, etc.

- Easy handling
- Very wear-resistant and durable
- No interaction with silicones
- Drivable after a few minutes (20 to 30 min at +20° C)
- Neutral, dark color (RAL 7021)

Consumption:

approx. 9 kg/sqm (at 6 mm

layer thickness) Packaging: 17.2 kg of which:

12 kg quartz sand (filler), 5 kg binder and 0.2 kg hardener

MADE IN GERMANY

- Wear-resistant and long-lasting
- Freely moldable
- Quick-drying
- Easy application
- For all common floors

Container size	Shipping weight kg/piece.	Article	€/pc.
12 kg quartz sand, 5 kg binder, 0.2 kg hardener	18	266.27.978	

Restore easy repair floor repair

Complete floor repair set for smaller repairs of damaged areas.

Usable on bitumen-containing substrates, e.g. (cast) asphalt.

Extremely durable, resistant, and thanks to quick curing (about 20 min at +20° C) can be driven on after a short time. Neutral, dark color (approx. RAL7021).

The complete set consists of:
10 kg of quartz sand (including activator) 1.25 kg of binder
1 mixing bucket

Fill mixing bucket (= shipping bucket) with binder, add quartz sand and mix with stirring tool. Done.

Consumption:

approx. 9 kg/sqm (at 6 mm layer thickness)

Easy Repair is not moldable – for this, Restore floor repair is suitable (see page 92).

MADE IN GERMANY

- For small repairs
- Wear-resistant and durable
- Fast curing
- For all common floors

Package size	Shipping weight kg/pc.	Article	€/St.
Set including mixing bucket: 10 kg sand, 1.25 kg hardener	12.5	266.20.652	

Floor Repair/Graffiti and Label Remover

Joint Repair Restoration

Extremely durable and resistant two-component mixture with fast-reactive binder for short curing times.

For quick, permanent filling of joints, deep cracks, or holes. Loadable after just 60 minutes (at +20 °C).

Permanently elastic, therefore particularly suitable for heavily used floors. Additionally prevents further stress cracks.

For various substrates: concrete, asphalt, screed

- Mechanically highly loadable
- Self-leveling
- Very wear-resistant and durable
- No interaction with silicones
- UV and weather resistant
- Solvent-free
- Neutral, dark color (RAL 7021)

Consumption: 1 kg/m for joint 20 x 50 x 1,000

Packaging: 5 kg elastic resin and 0.2 kg hardener

Note:
Joint width: at least 5 mm

- **MADE IN GERMANY**
- For indoor and outdoor use
- Permanently elastic
- Wear-resistant and durable
- Self-leveling
- For all common floors

graffitiCRACK Graffiti Remover and Label Remover P

- **MADE IN GERMANY**
- Extremely gentle
- Quick acting
- Biodegradable

Gel-based graffiti remover. Highly effective thanks to nanotechnology. Removes spray paints, markers, and various adhesives.

The novel active system does not "etch" the paint away, but causes the coating to swell and separates it from the substrate.

Works on all mineral substrates as well as on glass, metal, wood, 2-component paints.

- No smearing, no shadow formation
- Quick acting: 2 to 10 min

Apply graffitiCRACK with a brush. The paint swells up and is broken down into the smallest parts. Then wipe off with a damp brush and rinse with water. Done!

Consumption: 1 liter for up to 10 sqm
Container size: 1 and 10 liters

It is also based on the same principle
graffitiCRACK label remover P for the effortless removal of stickers, adhesive residues, and labels from paper. Acts quickly and powerfully, without attacking the substrate.

- Spray bottle for easy handling
- Suitable for metal, glass, ceramics, wood, plastic

Container size: 500 ml spray bottle

TIP:
For printed or painted surfaces, check material compatibility.

Warning and protection profiles

AVOIDING IMPACTS AND SCRATCHES

Our warning and protection profiles provide optimal protection against impacts and damage while also offering a clearly visible marking. Whether robust impact protection or reliable wall protection – our solutions protect both walls and equipment as well as employees from impacts and injuries, to increase safety in the workplace.

Impact protection	95
Wall protection	102

MORION impact protection

1m length

Warns and protects against danger areas. Neutralizes corners and edges, prevents impact injuries.

The self-adhesive elements adhere permanently and securely to smooth, cleaned, dust-free, and degreased surfaces, corners, and edges.

High-quality protective elements made of flexible, aging-resistant polyurethane foam with protective film.

- UV and solvent resistant, silicone-free
- Temperature resistant from -40°C to +100°C
- Brand classification B2
- For indoor and outdoor areas
- Easy cutting possible (knife)

- Protective strips made of recycled paper

Areas of application:

On machines, vehicles, mobile inventory, walls, beams, and passages. In storage, shipping, production areas, on transport routes, in laboratories, clinics.

Execution:

Length: 1,000 mm

Color: yellow-black Other colors available upon request (e.g. red-white or solid black) Easy installation: The protective elements are equipped with adhesive strips or are simply pushed onto the profiles to be secured.

(TIP: For extreme loads, additionally secure with commercially available PU glue.)

- For indoors and outdoors
- High-quality PU foam
- Absorbs even hard impacts
- Yellow-black (according to ASR A1.3)
- UV and solvent resistant
- Temperature resistant

Note:

For installation, practical 1-meter pieces have proven effective. For longer distances, 5-meter pieces are more advantageous.

 - For indoors and outdoors
 - For corner and round columns
 - With steel sheet
 - UV resistant

MORION **impact protection**
for columns

MADE IN
GERMANY

Designed to protect columns, e.g. in parking lots and underground garages. Prevents expensive and annoying damage to vehicles.

Suitable for rectangular and round columns as well as for walls, wall projections, passages, beams, etc.

Yellow-black protective profile with two embedded steel sheets for permanent fastening (anchors).

High-quality protective elements made of flexible, aging-resistant polyurethane foam:

- UV-resistant signal colors according to DIN 4844
- Temperature resistant from -40 °C to +90 °C
- Fire classification UL94
- Suitable for indoor and outdoor areas
- Silicone-free

Design:
(L x W x H) 500 x 200 x 20 mm
Color: yellow-black

TIP:

We recommend that when using rectangular columns, the protective profile should not be flush, but rather installed with a little "play" – this increases the absorption effect.

Loading ramp protection

NEW

- Versatile
- Effective protection
- Durable and flexible
- Easy installation

This flexibly applicable protective element is suitable for warehouses, parking garages, and (underground) garages. It effectively protects against damage in confined space conditions.

Suitable for indoor and outdoor use. Including mounting material: 3 x through anchors M8 x 120 mm

- Robust protection thanks to integrated steel reinforcement
- Versatile application
- Effective damage prevention

This protective element in hollow D-shape made of black rubber with steel reinforcement reliably protects against damage, absorbs hard impacts, and provides reliable protection even under high loads.

Ideally suited for loading ramps, storage, shipping, docks, and body construction.

Including fastening material:

3 x through anchors M8 x 120 mm

Chain stand

- Made of plastic
- Lightweight
- Quick and easy to block off
- Three variants
- Extremely cost-effective

GUARDA

Light chain warning stand

For easy, quick, and mobile blocking in storage, production, shipping, and administration. For indoor and temporary outdoor use.

Upper part made of plastic, cap with four integrated chain holders. Low center of gravity, secure stand.

Post with integrated plug connection for secure fixation with the base plate.

Also available as a set: 6 chain stands, 10 m chain (M-Poly-View), 10 connecting links, and 10 hanging hooks.

Note:

Maximum distance of the chain stands when using plastic chains: 2.0 m

Chain stand

GUARDA-Plus chain warning stand with heavy base

Chain warning stand made of robust plastic with a heavy, stable base plate (already filled with concrete). Upper part with two integrated chain hooks.

Easy assembly: Insert the upper part into the recess in the base. Easy disassembly: Upper part removable for space-saving storage

Delivery is made as a complete set consisting of:
4 tops
4 base plates
12.5 m plastic chain,
8 mm link thickness

Total height: 900 mm
Top: Base 50 mm Ø
plate: 280 x 280 x 45 mm

Set available in red-white or black-yellow.

- For indoor and outdoor use
- Made of plastic
- Stable
- Cost-effective

MORION Chain Warning Stand

Robust, stable barrier and guidance system. Quickly ready for use to block paths and areas or to create pedestrian routes. For hanging barrier chains.

For industry, warehouses, parking garages, open spaces, etc.

The rotatable top of the ball head protects the suspended chain from unauthorized detachment. A turn in the other direction releases the chain for detachment.

Patented ball head made of UV-stable ABS plastic.

Dimensions:
Base plate: 330 mm Ø
Top part: 60 mm Ø

Upper part made of painted aluminum. The plastic base can be filled on-site with sand or gravel (13.5 kg). White reflectors ensure good visibility at night.

Option: permanent fixation through four integrated dowel sockets

Accessories chains pages 120/121.

- For indoors and outdoors
- Made of aluminum
- High warning effect
- Very stable
- Cost-effective

Surface	Dimension (mm) H	Shipping weight kg/pc.	Article	€/pc.
 yellow painted	975	2.9	179.16.360	

EXTERNAL Chain Warning Stand with Eye Cap

Chain warning stand consisting of a guide pin with eyelet cap and heavy base made of recycled PVC. Guide pin fully red-white reflective for good visibility.

In combination with a plastic chain, even larger areas can be easily, flexibly, and cost-effectively delineated. Suitable for both temporary and permanent use.

With the rotatable eyelet cap, any corner variant can be easily realized. Simply pull the plastic chain through the eyelet cap and secure the starting and end posts with a link or hook.

Height with base: 1,100 mm
Diameter: 100 mm
Dimensions of the base:
70 mm Height 570 mm Ø
Maximum distance of the chain stands: 2.5 m

Accessories chain sides 120/121.

- Made of polyethylene
- With chain attachment
- Red-white reflective
- Stable

Color	Height/ Ø (mm)	Shipping weight kg/pc.	Article	when purchasing at €/pc.

Recycling foot (order separately)		8.5	291.26.009	

Chain stand

EXTERN Heavy chain warning stand with steel base

For permanent and temporary barriers. Flexible handling. Very robust and stable.

Upper part made of steel, hot-dip galvanized and plastic-coated. With two eyelets for hanging a chain. Base tray black, rust-proof painted, with or without carrying handle. Made of 2 mm steel sheet.

Base tray dimensions: 300 x 300 x 100 mm

- Low transport weight, as it can be filled on-site with sand, gravel, etc. (or permanently filled with concrete).

- Steel post can be firmly screwed to the base tray. When moving or repositioning, only the post needs to be lifted.

MADE IN GERMANY

- For permanent blocking
- Made of steel
- Very stable
- Fillable

EXTERN Heavy chain warning stand with recycling base

For permanent and temporary outdoor barriers. Flexible handling. Very robust and stable.

Steel post hot-dip galvanized and painted, with eye cap. Particularly durable. Solid, round base (15 kg) with grip recess.

Dimension of recycling base: 450 mm Ø

- The chain (6 mm Ø) can be threaded through the eye cap. Aligning the post distances according to the chain length is not necessary.

- Simple insertion of the steel posts into the recycling base for quick assembly and disassembly.

TIP:

The affordable M-DEKO view chain is excellent for this application.

- For permanent blocking
- Particularly durable
- Heavy-duty design
- High stability
- With grip recess

MORION Belt Warning Stand

Robust, stable barrier and guidance system. Quickly ready for use to block paths and areas or to create pedestrian routes.

For industry, warehouses, parking garages, open spaces, etc.

The self-retracting belt can be easily pulled out of the cassette and hung on the next belt stand. The tension spring ensures a controlled retraction of the self-rolling belt.

Each belt warning stand has a departing belt and three sockets for incoming belts.

Dimensions:

Base plate: 330 mm Ø

Top part: 60 mm Ø

Belt length: 3 m and 4 m

Belt width: 50 mm

Upper part made of painted aluminum. The plastic base can be filled on-site with sand or gravel (13.5 kg). White reflectors ensure good visibility at night.

Option: permanent fixation through four integrated dowel sockets

Wall belt

- i**
 - For indoor and outdoor use
 - High warning effect
 - Belt length 3 m or 4 m
 - Two types of attachment

MORION wall belt

Temporarily block or release paths quickly and effectively. For wall mounting. Wall bracket made of high-strength ABS plastic.

Two types of attachment:

- For screwing (e.g. wall, columns)
- Magnetic (e.g. in storage/shelf area)

The self-tensioning belt can be easily pulled out and hung on a wall clip (please order with it). The tension spring

ensures a controlled retractable self-retracting belt.

Using a belt connector (accessories see p. 102), two belt straps can be connected for blockages up to 8 m.

Dimensions:
Height : 130 mm
Depth: 110 mm
Belt length: 3 m and 4 m Belt width: 50 mm

MORION cone belt reflective

Traffic cone attachment for quick and ineffective blocking of areas indoors and outdoors. Can be attached to standard traffic cones.

The MORION cone belt features a double-sided integrated silver reflective strip. Increased visibility, both in unfavorable lighting conditions and during the day.

Clearly noticeable due to the bright orange housing with two additional hooks for hanging chains or barrier tape.

The self-tensioning belt can be easily pulled out and hung on another cone belt. Alternatively, the belt can be hung in a permanently mounted wall clip (accessories see this page left).

Dimensions:
Height: 200 mm
Depth: 110 mm
Belt length: 3 m
Belt width: 50 mm

A cost-effective version without reflective strips, but with a belt length of 4 m, is also available.

- For indoors and outdoors
- Silver reflective strip
- High warning effect
- With hook

Kegel straps

- i*
 - For inside and outside
 - UV resistant
 - Strap length 9 m
 - As a cone attachment

Skipper cone strap

The cone strap is attached to the guide cone or fixed to the wall with an adapter.

Especially suitable for outdoor use. Quickly and effectively block off larger areas: Four strap cassettes secure up to 80 sqm.

The self-tensioning belt can be easily pulled out and hung on the next belt cassette or a wall clip (accessory).

- 9 m long strap
- Red-white tape with high warning effect
- The lock button protects against unwanted rewinding.
- Alternatively: Wall mounting (via adapter)

Dimensions:
Height : 240 mm
Depth: 145 mm
Belt length: 9 m
Belt width: 50 mm

Accessories: wall clip, wall adapter

Skipper plastic post for attaching the belt cassette - for particularly good hold.
Top part orange, 95/130 mm Ø, with two reflective stripes.
Plastic base, 500 mm Ø, black, refillable.
Total height: 1,000 mm with base, 1,110 mm with base and belt cassette

Locking chains

Barrier chains are used in conjunction with barrier posts to demarcate roadways, sidewalks, parking lots, etc.

Like many street facilities, they are subject to heavy wear and tear, for example due to vandalism.

Tensile load and durability of locking chains are therefore important criteria.

Barrier chains are only sold in full bundles (= packaging units).

Tensile load:

Average load limit (longitudinal direction). In practice, higher values may occur with transverse loads (force parallelogram). Therefore, safety factors must be taken into account.

Test load:

For MNK quality chains, each meter is tested with the specified test load (longitudinal direction).

MNK-NYLON quality chains

Durable, heavy-duty link chains proven for decades.

Excellent signaling effect thanks to eye-catching, light-resistant traffic colors (solid color). The chains are tested meter by meter for tear resistance. Each bundle is accompanied by an inspection certificate.

Made of high-quality UV- and weather-resistant nylon. Resistant to seawater and many chemical compounds. Non-conductive and non-heat-conductive; anti-magnetic. -40° to +80° C. Lightweight. Highly durable. 3-year warranty

M-DEKO visual chains

Made of high-quality nylon. With the same properties as MNK quality chains, but not stress-tested. Recommended when visibility is the primary consideration.

M-POLY visual chains

Made of polyethylene. Especially recommended for indoor use. Extremely affordable.

M-FERRO-SIGNAL

For the highest demands, where even MNK-NYLON quality chains are no longer sufficient. Excellent warning effect thanks to traffic colors.

Galvanized steel chain. Additionally coated with highly weather-resistant plastic. No exposed chain links – all individual chain links are welded.

SM steel chains

They are used when extreme durability is more important than signaling. Affordable. Hot-dip galvanized steel. Long-term corrosion resistance. Zinc-colored.

stainless steel chains

A high-quality alternative to SM steel chains. They are ideal for the stainless steel CITY bollards BERLIN and MILANO. Prestigious and durable. Stainless steel, material 1.4401. Corrosion-resistant. For extreme loads. Shiny.

Barrier chains

Barrier post

- i**
 - Minimizes damage, as it is spring-loaded
 - Hot-dip galvanized, robust and durable
 - Low maintenance effort
 - Also suitable for embedding in concrete

MORION-Swing
Self-righting barrier
post

MADE IN
GERMANY

Barrier post made of steel with integrated spiral spring. For tight, confined maneuvering areas with a high risk of damage: parking lots, underground garages, curves, etc.

When starting, the post gives way up to 30° and automatically returns to the starting position. This avoids expensive damage.

New Color DB 703

- For bolting or embedding in concrete
- Fixed or removable, with profile cylinder or triangular lock
- In the SESAM variant also tiltable
- Diameter:
60, 76, 90, 70 x 70 mm
- Color variants: DB 703, red-white, black-yellow, hot-dip galvanized, available on request in all RAL colors

MORION barrier post

MADE IN
GERMANY

Barrier posts – Safety and flexibility in perfection

Our high-quality barrier post combines the highest safety standards with flexible application possibilities. Available in various designs, it offers the right solution for every requirement.

Fixed installation

The variants for bolting or embedding in concrete ensure a stable and permanent connection with the substrate, ideal for permanent barriers.

Removable models

Our removable models ensure maximum flexibility, equipped with a triangular lock or a profile cylinder lock. These allow for easy and quick disassembly when needed.

Practical drill holes

By default, there are drill holes for up to two eyelets (180°). These can be ordered directly or retrofitted at any time to attach additional barriers or chains.

Increased visibility

Especially in hazardous areas or in darkness, the red-white model with a reflective red ring offers optimal visibility and safety.

Modern color variant

New in our range is the elegant color variant DB703 (Anthracite Iron Glitter Fine Structure). Optionally available with a stylish white reflective ring, this barrier post harmoniously integrates into modern environments while providing the highest functionality.

PARATlift

Retractable barrier post

MADE IN
GERMANY

The PARATlift solves many barrier problems. Ideal for streets and squares that are only temporarily open to traffic: pedestrian zones, marketplaces, parking areas, garage entrances, archways, etc.

The post can be lowered in seconds with a triangular key according to DIN 3223. Traffic can roll over the nearly flush concrete ground sleeve unhindered.

Variants:

- Semi-automatic: After unlocking, the gas spring pushes the upper part almost completely out of the ground sleeve. A short manual lift and the post locks automatically. To lower it, the upper part is unlocked and simply pushed down.
- Manual: A spiral spring pushes the upper part 5 to 8 cm out of the ground sleeve after unlocking. By manual lifting, the post locks automatically. To lower it, the upper part is unlocked and manually guided down.

Design:

- Upper part: 76 mm Ø 2.5 mm wall thickness
- Lower part: 100 x 100 mm

Total length: 2,050 mm, of which 1,150 mm underground

Easy installation. If damaged, the upper part can be replaced.

Surface treatment:

Top galvanized and painted (base housing galvanized)

Installation note:

Pay attention to proper drainage (gravel filling). The PARATlift must not be installed in standing water (e.g. groundwater).

Maintenance:

Important for proper function. Remove accumulated dirt at least biannually, clean all moving parts, and grease the locking hook.

Execution	Surface	Color	shipping weight kg/each	article	€/each
Manual	galvanized and painted	red-white	22.3	140.16.470

triangular key (please order additionally)			0.2	130.12.326	

Barrier post

- Best seller
- Top price-performance ratio
- Durable locking mechanism
- Diverse selection

PARAT B Removable Barrier post

MADE IN
GERMANY

The PARAT B is a flexible, removable barrier post with a standardized triangular lock. Ideal for temporarily released roads and areas such as pedestrian zones, marketplaces, parking lots, or garage entrances.

Recommended by the fire department according to DIN 14 090 for access roads and rescue areas.

Surface treatment:

Hot-dip galvanized or hot-dip galvanized and painted

Types of fastening:

- For embedding in concrete with ground sleeve
- For screw mounting with special base plate (250 x 100 x 48 mm)

Closure:

Removable by triangular lock according to DIN 3223

Note:

No accident risk with removed post: The embedded and flush ground sleeve with the road surface has only a small opening.

Note:

Simply screw it in – without earthworks or concreting. This saves effort and costs, while the appearance of the surface, such as paving, remains completely intact.

Barrier post

- Made of steel
- Ground-level installation
- No tripping hazard
- With triangular or cylinder lock
- Foldable

SESAMplus tipping post

MADE IN
GERMANY

Maintenance:

Important for proper function.
Remove accumulated dirt at
least biannually, clean all
moving parts.

Modern tipping post that fully
preserves the traffic area and
avoids tripping hazards. In the
folded state, the SESAMplus
disappears flush into a robust
ground basin. The vehicle can then
roll over the post unhindered.

Ideal for blocking traffic routes of all
kinds, parking lots, garage entrances, fire
department access according to DIN 14
090, etc.

The erection of the upper part is
done using a special wire hook.
Once the post is upright, the open
basin (aluminum) is automatically
protected by a stable metal plate.
This eliminates tripping hazards.

Execution:

Robust steel post: 70 x 70 mm

Above ground: 900 mm

Wall thickness: 2 mm

Surface treatment:

Hot-dip galvanized and painted

Mounting:

For embedding in concrete. Extremely
low installation depth due to horizontal
mounting type. Ensure horizontal
installation.

Closure:

Optionally with a keyed alike round
cylinder lock, including two keys
(Model A) or a triangular lock
(Model B) according to DIN 3223.

Installation note:

Pay attention to proper drainage (gravel
filling). The SESAMplus must not be
installed in standing water (e.g.
groundwater).

SESAM-Sprint tipping post

This patented tipping post excites: reliable technology, modern design, attractive price.

The annoying bending is eliminated: Just step on the foot pedal and the post will automatically straighten itself – supported by a gas spring. Folding it is just as easy: Unlock with the key, give it a light push, and the SESAM-Sprint gently lays down on the ground.

The drive-over height is completely unproblematic at 75 mm for all vehicle types.

Execution:

Profiled aluminum post: 70 x 50 mm
Wall thickness: 3 mm

Base plate: 250 x 90 mm

Surface treatment:

Anodized aluminum with red reflective stripe

Mounting:

For screw mounting, mounting dowels included in the delivery

- Aluminum post
- Foldable
- Convenient operation
- Corrosion resistant
- Modern design

Closure:

With a keyed alike or differently keyed round cylinder lock, including two keys

MADE IN GERMANY

SCHUPO tipping post

For blocking parking spaces, driveways, access paths, etc.

After folding in the direction of travel, the post can be driven over. The locking bracket is secured with a padlock (provided by the customer).

Drive-over height: 110 mm

Design:

Steel post: 60 mm Ø
Wall thickness: 2 mm
Opening max. 5 mm
Ø for padlock
Base plate: 160 x 140 x 10 mm

Surface treatment:

Hot-dip galvanized or hot-dip galvanized and painted

SESAM-private

Tilt post

MADE IN
GERMANY

The extra-flat parking bracket: With the unique SESAM-private, you can reliably protect parking spaces from unauthorized parkers.

- The minimized drive-over height (68 mm) can be easily driven over by all types of vehicles.
- The impact protection spares the tires.
- Exceptionally stable due to the lateral guidance of the upper part

Execution:

Robust steel post: 70 x 50 mm wall thickness: 3 mm
Locking width: 780 mm base plate: 220 x 140 x 68 mm

Surface treatment:

Hot-dip galvanized or hot-dip galvanized with reflective red rings or additionally painted white

Types of fastening:

For embedding in concrete or for bolting on

Closure:

With a different closing cylinder lock, including two keys

Option: Cylinder lock keyed alike (no extra charge) or profile cylinder lock prepared

SESAM parking barrier

Foldable parking barrier made of round steel with a robust square middle post. Particularly stable and sturdy. Secures parking spaces and driveways from unauthorized parking and releases them easily. Simple handling through securing or unlocking the middle post via cylinder lock.

With reflective red rings for good visibility even in the dark. Suitable for all vehicle types due to the extremely low drive-over height of 55 mm. Tire-friendly thanks to rounded base plates.

The parking bracket is delivered fully assembled. Fastening material included in the delivery.

Version:
Barrier width: 960 mm
Total height: 455 mm
Depth (folded): 955 mm
Pipe diameter: 50 mm
Middle post: 50 x 50 mm
Wall thickness: 2 mm

MORION cable bridge for rolling up

Easy crossing and protection of cables and small hoses. The cable bridge is rolled out and the cable is inserted from above through the opening - done.

Flexible, high-strength rubber mixture. Profiled surface for easy crossing.

Low crossing height 30 mm.

Cost-effective solution for protecting smaller cables over longer distances. Withstands truck and forklift traffic.

Recommended crossing speed:

5 to 20 km/h

1 cable/pipe channel: 20 mm

Dimensio
ns:

100 x 10,000 x 30 mm (L x W x H)

- For roads, construction sites
- Made of rubber
- Up to 4t axle load
- 10 m length
- Space-saving and can be cut
- Economical

Dimensions (mm) L x W x H	Color	Shipping weight kg/pc.	Article	€/pc.
100 x 10,000 x 30	black	21	279.26.118	

MORION small cable bridge

Problem-free crossing and protection of cables and hoses.

Flexible, high-strength mixture of recycled rubber. Profiled, grippy surface for easy driving over. Underside with anti-slip rubber lips. Drive-over height 65 mm.

Withstands truck and forklift traffic. Also suitable for occasional heavy traffic.

Recommended crossing speed:

5 to 10 km/h

Signal effect through yellow and black elements.

3 cable ducts:

2 x 20 mm and 1 x 45 mm

- For roads, construction sites
- Recycling hard rubber
- Up to 8t axle load
- Grippy surface
- Two colors

Cable bridges

- For roads, construction sites
- Recycled rubber
- Up to 8 t axle load
- Endless assembly
- With protective cover
- 2-channel

MORION cable bridge
2-channel

Problem-free crossing and protection of cables or small hoses. Easy handling, quick assembly and disassembly, hassle-free transport. Ideal for trade fairs, events, folk festivals, company premises.

Made from a special, vulcanized hard rubber mixture. Signal effect through yellow cover made of high-quality polyethylene. Ribbed, slip-resistant structure.

All elements with pin/slot system for any expansion.

Withstands passenger car and truck traffic. Recommended crossing speed:

5 to 10 km/h

2 cable channels (W x H): 25 x 30 mm passing height 45 mm.

Dimension:
245 x 1,000 x 45 mm (L x W x H)
net width in combination: 970 mm

Execution:

- 5-channel

MORION cable bridge

medium-sized

Problem-free crossing and protection of cables, small hoses, or pipes.

Made from a special, vulcanized hard rubber mixture. Signal effect through yellow cover made of high-quality polyethylene. Ribbed, slip-resistant structure.

Crossing height 50 mm.

All elements with pin/groove system for any expansion.

Withstands car and truck traffic. Heavy traffic should be avoided.

Recommended crossing speed:
5 to 10 km/h

5 cable channels (W x H): 36 x 34 mm

Dimensions:
590 x 930 x 50 mm (L x W x H)
Net width in composite: 900 mm

End elements and angle pieces

- Endless assembly
- With protective cover and carrying handle
- 3-channel

MORION cable bridge
large

Problem-free crossing and protection of cables, hoses, or pipes.

Highly loadable due to special, reinforced hard rubber mixture. Signal effect through yellow cover made of high-quality plastic.

Ribbed, slip-resistant surface.

Crossing height 75 mm.

All elements with pin/groove system for any expansion.

With carrying handle for easier transport.

Withstands truck and forklift traffic. Also suitable for occasional heavy load traffic.

Recommended crossing speed: 5 km/h

3 cable ducts (W x H):
2 channels 68 x 50 mm
1 channel 55 x 50 mm

- Usable at any location
 - Easy to handle
 - With anti-slip surface
 - Carrying handle
- for convenient transport

Wheelchair ramp set for cable bridges

Robust wheelchair ramp made of recycled rubber for combination with the MORION cable bridge 3-channel (see p. 126). Allows wheelchair users to safely cross cable bridges. The structured, non-slip ramp surface provides reliable grip. Cables and hoses remain securely protected.

Also suitable for walkers, strollers, hand trucks, etc. Load capacity up to 200 kg.

A set consists of 2 ramps.

Dimensions of a single ramp: 744 x 440 x 75 mm Weight: 8 kg each

The wheelchair ramp is not suitable for motor traffic.

- No assembly required:
Elements are placed on the longitudinal side of the cable bridge.
- The cover of the cable bridge can still be opened.
- Generous width of 880 mm

Dimensions (mm) in set L x W x H	Shipping weight kg/pc.	Item	€/set
744 x 880 x 75	17	279.25.942	

Cable bridges

- i**
 - For roads, construction sites
 - Reinforced hard rubber
 - Highly load-bearing
 - For heavy traffic

MORION hose bridge

For safely driving over hoses, pipes, and cables up to 75 mm in diameter. Profile elements made of highly load-bearing, reinforced hard rubber mixture.

Designed for construction sites and frequent heavy traffic. Can be expanded as needed. Drive-over height 85 mm, extra flat ramped. Also suitable for forklifts with appropriately sized wheels (from 35 cm in diameter). Yellow reflective stripes for better visibility.

2 hose channels:
each 92 mm for hoses up to 75 mm in diameter (B-, C-, and D-hoses).

Dimensions (mm) L x W x H	Shipping weight kg/pc.	Article	€/pc.
855 x 300 x 85	13	279.14.327	

NEW

- Extremely load-bearing
- Robust hard rubber mixture
- Anti-slip surface
- Modular design

MORION Cable Bridge XL

Specifically developed for the toughest requirements, the truck cable bridge effectively protects pipes, hoses, or cables from damage caused by heavy vehicles.

The robust hard rubber mixture with slip-resistant surface and white arrow markings ensures secure grip and clear traffic guidance.

Thanks to the modular design multiple elements can be assembled in endless construction using H-connectors.

TIP:
Ideal for use in construction sites, events, or industrial applications.

Note:
The cable bridge is specifically designed for use in heavy-duty areas and is not suitable for car traffic, as damage to the vehicle can occur due to the height of up to 110 mm.
ONLY for trucks (max. 40t)

Barriers

MORION Barrier Tape

Inexpensive, extremely tear-resistant multipurpose tape made of polyethylene.

Environmentally friendly.

Quick securing of construction and hazard sites. Effective blocking of dangerous areas, driveways, and parking lots. Effortless marking of traffic routes and obstacles.

- Role 500 m / Width 80 mm
- Printed on both sides in red-white or black-yellow, lightfast
- In a sturdy roll box
- Recycled variant "Blue Angel" certified. PVC and heavy metal free.

i

MORION Barrier Fence Plastic

Barrier fence made of high-quality, UV-resistant polyethylene (HDPE) in bright orange warning color with red and white reflective stripe (RA1). Unmissable by day and night.

For delineating non-public construction sites, blocking roads and squares. For events, to separate and direct pedestrian traffic.

Endless assembly through hook and eye principle.

Easy handling due to low weight. Still very stable due to wide base feet. The base foot is shortened towards the "pedestrian side" to minimize tripping hazards.

For the transport of the barrier grids, the base feet can be rotated sideways.

- Made of polyethylene
- With "anti-trip foot"
- Reflective
- Low weight
- Stable

MORION Shaft Protection Gate Plastic

The foldable MORION shaft protection grid is made of recycled plastic with a wide reflective film type 1 for good visibility.

Four elements form a set. The clever connection technology allows for setup as a surround protection (for shafts, entrances) or in any angular shape to secure work areas.

Extremely robust design with high stability.

Each set can be connected with another set to form a larger unit.

Dimensions:
1,000 x 1,000 x 1,000 mm

Scherensperre EASY-GATE

NEW

The mobile barrier made of robust plastic (PE) is ideal for securing hazardous areas. It can be filled with sand to increase stability. With the red and white reflectors, it also ensures good visibility in the dark.

The barrier can be extended up to a length of 2,500 mm and does not require permanent installation.

Total width: 2,500 mm
Height: 960 mm
Depth: 380 mm
Weight: 6.1 kg (unfilled)

When not in use, the barrier can be folded down to 300 mm to save space.

- Mobile barrier
- Fillable for increased stability
- High visibility due to integrated reflective strips
- Also suitable for outdoor use
- Space-saving storage

Mobile barrier FLEX-GUARD

NEW

The mobile barrier system is ideal for the flexible securing of maintenance, cleaning, and marking work indoors.

It consists of 16 permanently connected elements and can be extended up to 4 meters.

Smooth-running solid rubber wheels and ergonomic handles allow for easy transport.

Every second element is equipped with a warning symbol.

When not in use, the barrier can be folded down to save space to 320 mm.

Stable rubber bands keep the barrier closed.

- Mobile barrier for indoor use
- Quick and flexible to use
- Setup: straight, curved, circular
- Extendable up to 4 meters
- Easy transport

- i

 - Flexibly usable
 - Tripod
 - Stable
 - Foldable

Equipped with carrying handle and standardized opening for the reception of warning lights (pipe diameter 12 mm, length 25 mm) (by the construction site).

Two versions:

- Retroreflective
- Fluorescent

Two sizes:

- 700 mm side length of the traffic sign, 970 mm total length (urban and rural areas)
- 900 mm side length of the traffic sign, 1,270 mm total length (expressways and highways)

TRIO folding signals can be used flexibly. All traffic signs are available. Additional texts can be easily changed using 3 push buttons.

Other symbols and additional texts on request (from 5 pieces).

TRIO folding signal

The three-legged folding signal quickly and conspicuously secures work, accident, and hazard sites. When deployed, large visibility areas ensure early recognition. When folded, the TRIO fits anywhere in the included transport case.

A high level of stability and a long service life are ensured by the robust construction, the practical folding mechanism, and the durable, mechanically high-loadable foil.

MORION Warning Marking

Vehicles used in the construction, maintenance, waste disposal, or cleaning of roads must be marked with red-white reflective warning marking, film type 2 (DIN 30 710) (§ 35 StVO, para. 6).

- Optimal for flat surfaces and curves
- For permanent use
- Right and left directing
- Durable

- According to DIN 30 710
- For vehicles § 35 StVO
- Reflective RA2
- Self-adhesive
- 3M quality

MORION Warning Marking FLEX

Vehicles used in construction, maintenance, waste collection, or street cleaning must be marked with red-white reflective warning markings, film type 2 (DIN 30 710) (§ 35 StVO, para. 6).

- According to DIN 30 710
- For vehicles § 35 StVO
- Reflective RA2
- Self-adhesive and removable
- Flexible and elastic
- Cost-effective

Premium quality through elastic base film and special adhesive. Optimal for vehicles where the film needs to be removed later (leasing).

- Flexible, adapts to folds, edges, and curves
- Correctable and removable
- Right and left directional
- Durable

For temporary use: Warning marking laminated on magnetic film.

Traffic cone

- i*
- Made of PVC
 - One-piece
 - Weight class II and III
 - Red-white retro-reflective
 - Film type A and B
 - According to TL and DIN 13422
 - BAST tested

750 mm with grip recess

MORION Traffic Cone EU

One-piece, red-orange traffic cones made of PVC for use in public areas. Fully red-white retroreflective. Meets weight class II of the TL traffic cones. Therefore particularly suitable for frequent repositioning of the cones (e.g. marking, mowing work).

Two heights: 500 and 750 mm

Cone base: 500 mm = 287 x 287 x 33 mm
750 mm = 400 x 400 x 39 mm

Types of films:

- Type A; RA1 (Reflective film)
- Type B; RA2 (High reflective film)

Corresponds to the TL guide cone and DIN EN 13422 – BAST tested.

Weight class III for cones 750 mm for even higher stability (TL-compliant).

Note:

According to RSA21, the minimum reflection class is RA2.

- Weight class III
- Stable
- Film type A and B
- According to TL and DIN 13422
- BAST tested

MORION Reflex Cone EU

Further development of the previous Reflex Cone. Takes into account increased requirements from practice and new international standards.

Future-proof:

Meets national and international standards. Tested according to:

- TL traffic cone – BAST tested
- DIN EN 13422 – BAST tested

Usable throughout the EU, Switzerland, and Norway. Required for heavy-duty escort vehicles (BF3/BF4) – in version 750 mm RA2.

Practice-oriented:

- Extra-wide grip recess for safe handling
- Better protection of the red-white reflective film through extra high spacers

Note:

According to RSA21, the minimum reflection class is RA2.

- Bottom with corner knobs (adjustable over fresh markings)
- Heavy, optimized traffic cone base

Two heights: 500 and 750 mm

Cone base: 500 mm = 315 x 315 x 43 mm
750 mm = 445 x 445 x 43 mm

Types of films:

- Type A; RA1 (Reflective foil)
- Type B; RA2 (High reflective foil)

Foil type/BAST-No.	Height (mm)	Shipping weight kg/pc.	Article	upon removal of €/piece.
A (RA1) V4-05/2012	500	3	350.27.508	
B (RA2) V4-06/2012	500 (according to RSA21, the minimum reflection class is RA2)		350.29.878	
A (RA1) V4-07/2012	750	6	350.20.286	
B (RA2) V4-08/2012	750 (according to RSA21, the minimum reflection class is RA2)		350.28.280	

Guide cone

MORION Reflective Cone

Secure construction sites quickly and reliably. Excellent visibility day and night due to the fully retroreflective red-white reflective film. With particularly strong wide-angle effect.

Shatterproof, cold and heat resistant, flexible and stable. Comply with the TL guide cones.

The reflective material corresponds to film type A of the TL guide cones.

High stability

Corresponds to weight class III of the TL guide cones. Can be easily removed by a slow-moving vehicle.

Exemplary passive safety

Break point when driven over at high speed. The lightweight cone body separates from the heavy cone base.

- Made of PE and recycled PVC
- Two-part
- Weight class III
- Stable
- Cone Type A
- Tested according to TL, BAST

Environmentally friendly

Base made of recycled material. Base and reflective film can be separated and disposed of in a sorted manner.

Two heights: 500 and 750 mm

Cone base: 500 mm = 310 x 310 x 45 mm
750 mm = 440 x 440 x 42 mm

Foil type/BAST. No.	Height (mm)	Shipping weight kg/pc.	Article	upon acceptance of €/piece.

A (RA1) 94 3S 001	750	6	350.12.728	

EUROPA Guide Cone

- Made of rubber
- One-piece
- Frost-resistant
- Stable

Guide cone made of durable rubber mixture for non-public areas. Extremely popular in traffic training and education, practice areas, test tracks, and car races due to its flexible shape.

Flexible and robust. Absolutely weather-resistant. Not brittle even at extremely low temperatures. Large square base plate, wide cone shape. Low center of gravity. Stable.

Two heights:

- 330 mm with a painted red ring
- 510 mm with two painted red rings

Note:

Traffic cones are required in public areas according to TL.

Colors: red-white or red-yellow. Other colors on request (e.g. blue-white), from 30 pieces.

Color	Height (mm)	Shipping weight kg/piece.	Article	when purchased at €/piece.
KOBOLD				
red-white	330	1.1	352.12.354

red-yellow			352.11.136	

Day-glow traffic cone

The affordable alternative.

Use in operational and non-public areas. For quick and short-term barriers and safety measures. Good warning effect due to the day-glow red-orange coloring. Not BASt tested.

Three heights:

- 350 mm with a white ring
- 500 and 750 mm with two white rings

Cone base: 350 mm = 230 x 230 mm, 500 mm = 290 x 290 mm, 750 mm = 400 x 400 mm

Note:

In public areas, traffic cones are required according to TL.

- Made of PVC
- One-piece
- Durable
- Affordable
- Three sizes

Day-glow traffic cone – Set

The cone sets are quick and easy to set up. Ideal for temporary barriers.

Simply attach the freely rotating chain hook made of polyethylene to the cone and hang the chain. The hooks' slats adapt to the cone openings and ensure a secure hold.

Set consisting of:

5 day-glow traffic cones (500 or 750 mm), 10 m chain red/white (M-Poly-Visibility) and 5 chain hooks

Chain hooks also available individually:

1 package = 10 pieces

Alternatively also for blocking with barrier tape.

- Temporary blocking
- Space-saving
- Affordable
- Two sizes
- 5-piece set

- Made from recycled material
- For delimiting
- Low construction
- Reflective
- Two colors

MORION divider

Frontal or lateral parking delimitation. Replaces or supports the marking of parking spaces. Provides orientation. Optimizes the available space. Ideal for parking lots, in parking garages and underground garages, for marking no-parking areas.

Also passable due to low construction height.

Made from reprocessed rubber. Available in black or reddish-brown, each with integrated white retroreflective tape.

Mounting dowels for concrete or asphalt floor are included in the delivery.

Additionally, bonding is possible.

Color	Dimensions (mm) L x W x H	Shipping weight kg/pc.	Item	€/piece

Traffic regulation and parking aids

FOR A FUNCTIONAL DESIGN OF
PARKING AND TRAFFIC AREAS!

Our solutions for traffic regulation and parking aids help you and your customers to optimally organize parking spaces and traffic areas. Whether parking aids, curb ramps, guide cylinders, or road humps – our products enable targeted traffic control and contribute to speed reduction. Rely on our high-quality systems for smooth traffic management and well-structured parking space design.

Parking aids 157

Curb ramps	160
Guide cylinders	164
Road humps	167

- Complete set including fastening material •
- Sustainable from recycled material •
- Durable and resistant •
- Optimal visibility •
- Bonding with special adhesive possible

Wheel stop Park-AID®

The further development of our proven wheel stop: Optimized, modern design, even better quality. For lateral or frontal parking limitation. Facilitates parking, creates order and safety.

Recycled rubber, highly compressed, for long durability. Very good visibility all around: Double-sided reflective strips – also on the front side. Oil and temperature resistant as well as UV-stable. For bolting.

Colors: • Black with yellow or white reflective strips • Red-brown with white reflective strips

Mounting dowel for concrete or asphalt floor included. Alternatively, bonding is possible.

Special adhesive for Park-AID®

Bonding instead of bolting: 3-component adhesive based on resin with fast-reactive binding agent. For substrates made of concrete, asphalt, bitumen, and epoxy-coated surfaces. Neutral, dark shade (RAL 7021).

17.2 kg of which 12 kg quartz sand (filler), 5 kg binder and 0.2 kg hardener

Consumption: approx. 4.5 kg per sqm (at 3 mm layer thickness)

Assembly instructions:

For a well-shaped finish of the extruding adhesive, a (cardboard) template is recommended.

TIP:

Adhesion test on PU-coated or extremely smooth polished surfaces.

- Simple, quick assembly through plug-in system
- Available in three color variations
- For bolting down

BLACK BULL truck entry aid

MADE IN
GERMANY

The truck entry aid clearly and safely delineates entry areas and assists truck drivers when reversing. Ideal for marking access to loading ramps. For better visibility with (reflective) stripes.

Set consisting of one left/right entry angle and two entry straight sections.

High resistance due to pressure distribution over three base plates on each side.

The truck entry aid can be ideally complemented with the impact protection post truck parking aid (see p. 141).

Surface treatment:

- For outdoor use:
hot-dip galvanized
hot-dip galvanized and plastic-coated

Color:

Zinc color with red reflective stripes
White with red reflective stripes
Traffic yellow with black stripes

Dimensions:

Total length: 2,800 mm each

Height: 280 mm

Diameter: 108 mm

Wall thickness: 3.9 mm

Base plate: 200 x 200 x 10

Drill hole: mm Ø 18 mm

Fastening:

for doweling

Fastening material: choose fastening according to substrate (24 dowels per set)

Curbs ramps

Curbs ramp rubber

Curbs ramp made of vulcanized rubber, black dyed with white reflective areas.
No assembly required. Safe due to high self-weight. Additional anchoring possible.

Especially suitable when a flat incline is desired.
Ideal for walkers, wheelchairs, vehicles, hand trucks.

By using a plug-in system, multiple ramps can be connected side by side as needed to achieve the desired width and thus enable use for wheelchair users.

Mounting materials included in the delivery.

- Especially flat incline
- Low height
- Additional anchoring possible
- Ribbed surface
- Suitable for trucks

Guide cylinder

- i*
 - For inside and outside
 - Made of polyethylene
 - Driveable
 - With joint
 - Two-part
 - Reflective

FlexPin

FlexPins are fully reflective guide cylinders made of polyethylene. They warn of dangers and obstacles, separate lanes or types of traffic from each other. For flexible separation of paths and transitions, as boundary posts. Unmissable by day and night.

The FlexPin is the "flexible" variant of the GuidePin. Due to a joint at the cylinder base, it can be approached safely and can be rolled over in an emergency. After that, it automatically rights itself.

Ideal where occasional driving on or over is unavoidable. A bayonet lock connects the cylinder to the robust rubber base. This is either anchored with screws or glued to the roadway with commercially available adhesive.

Diameter: 100 mm
Base dimensions of the cylinder:
60 mm height 270 mm Ø

- Guide cylinder red, red-white reflective foil
- Guide cylinder black, yellow reflective foil

GuidePin

GuidePins are fully reflective guide cylinders made of polyethylene. They warn of dangers and obstacles, separate lanes or types of traffic from each other. For flexible separation of paths and transitions, as boundary posts. Unmissable by day and night.

Hit GuidePins realign themselves multiple times.

A bayonet lock connects the cylinder with the robust rubber foot. This is either anchored with dowels or glued to the roadway with commercially available adhesive.

Diameter: 100 mm

Dimensions of recycling foot: 60 mm height, 270 mm Ø

- For indoors and outdoors
- Made of polyethylene
- Driveable
- Two-part
- Red-white reflective

TIP: If a run-over is not excluded, the FlexPin or ComeBack is recommended.

GuidePin with eye cap

- For indoor and outdoor use
- Made of polyethylene
- With chain attachment
- Two-part
- Red-white reflective

Lead pin with additional eye cap. In connection with a plastic chain, even larger areas can be easily, flexibly, and cost-effectively delineated.

With the rotatable eye cap, any corner variant can be easily realized. Suitable for both temporary and permanent use. Simply pull the chain through the eye cap and secure the starting and end posts with a link or hook.

LeitPin-Boje

Reflektierender Leitzyylinder aus Polyethylen mit Stahlseil zur Decken- und Bodenmontage.

Konzipiert, um deutlich auf Schächte, Be- und Entlüftungsröhre, Leitungen oder Mauervorsprünge hinzuweisen.

Das Stahlseil wird an der Decke und am Boden befestigt. Fixierung der LeitPin-Boje in jeder beliebigen Höhe.

Maße Leitzyylinder: 950 mm Höhe
100 mm Ø
Länge des Stahlseils: 2.500 mm

Im Lieferumfang sind Seil, Klemmen, Höhenfixierung und Spannschloss enthalten.

- Für innen und außen
- Aus Polyethylen
- Variable Befestigungshöhe
- Reflektierend

- Gelbe Reflexstreifen

EasyRide Fahrbahnschwelle

Die EasyRide Fahrbahnschwelle ist der konzeptionelle Gegenentwurf zu der SafeRide Schwelle (S. 148).

Ziel ist es, eine sehr deutlich spürbare fahrdynamische Wirkung zu erzielen, um die Passiergeschwindigkeit stark zu reduzieren. Erreicht wird dies durch eine kurze Überfahrlänge von nur 300 mm und Bauhöhen von 55 und 75 mm.

EasyRide wird aus schwarzem Recycling-Gummi hergestellt. Gut sichtbar durch gelbes Reflexband und zusätzliche Katzenaugen.

Die Elemente werden durch ein Nut- und Zapfensystem miteinander verbunden und anschließend aufgedübelt.

Zwei Höhen für verschiedene Geschwindigkeiten:

EasyRide 55
(Bauhöhe 55 mm) für 6–10 km/h

EasyRide 75
(Bauhöhe 75 mm) bis 5 km/h

- Schnell und leicht zu montieren
- Effizient: hoch wirksam
- Gut sichtbar
- Umweltfreundlich
- Als Kabelbrücke nutzbar (2 x 30 mm Ø)

Ausführung	Farbe	Abmessung (mm) L x B x H	Versandgew. kg/St.	Artikel	€/St.
Normelement	schwarz/gelb	300 x 1.800 x 55	35	284.21.993

Road bumps

- i**
 - Recycled material
 - For heavy traffic
 - Pleasant to drive over
 - For 15 to 30 km/h
 - Yellow reflective stripes

SafeRide road bump

The SafeRide road threshold allows for a pleasant crossing without sacrificing the desired reduction of dynamic driving effects.

This is achieved by a crossing length of 900 mm or 940 mm and a less steep ramp.

Calms traffic in operational areas, airports and container ports, open spaces, entrances and exits, loading areas, etc.

SafeRide is made from recycled rubber and is suitable for permanent heavy-duty traffic. Integrated yellow reflective inserts for good visibility at night.

The individual elements are connected through a tongue and groove system and then doweled.

For long-term use, additional gluing of the elements is recommended.

Two heights for different speeds:

- SafeRide 50**
(Construction height 50 mm) for 25-30 km/h
- SafeRide 70**
(Construction height 70 mm) for 15-20 km/h

- Pleasant crossing creates higher acceptance among the "users"
- Enforces appropriate driving behavior
- Grippy profile even in wet conditions
- Environmentally friendly
- For heavy-duty traffic
- Black end elements

Execution	Color	Dimension (mm)L x B x H	Shipping weight kg/pc.	Article	€/St.
Standard element	black/yellow	900 x 500 x 50	17	284.20.824	
		940 x 495 x 70	20	284.26.552

		940 x 450 x 70	16	284.28.854	
End with groove		900 x 450 x 50	14	284.25.564	
		940 x 450 x 70	16	284.22.604	

You need 6 fasteners per standard element and 4 fasteners per end element. You can find suitable material on pages 74/75.

- High-quality rubber
- For heavy traffic
- Durable
- For 5 to 20 km/h
- With cat eyes

TOPSTOP road bump

Rubber

The TOPSTOP road hump made of high-quality rubber is a proven means to force drivers not to exceed certain speeds.

TOPSTOP reliably regulates traffic at exits, loading areas, scales, intersections, or kindergartens and schools. The yellow-colored and black elements with embedded cat's eyes are clearly visible day and night.

The elements are doweled. A guide rod distributes the starting forces over the entire threshold and helps with alignment. For a high proportion of heavy traffic, we recommend rubber dowels.

For use on public roads, TOPSTOP-20 is recommended.

Two heights for different speeds:

TOPSTOP-10

(Construction height 70 mm) for 5–10 km/h

TOPSTOP-20

(Construction height 50 mm) for 10–20 km/h

- Yellow-black contrast color
- Non-slip profile even in wet conditions
- Enforces appropriate driving behavior
- With cat eyes
- Yellow end elements

Road bumps

TOPSTOP road bump recycling

The TOPSTOP road bump made of recycled plastic is an inexpensive means that forces drivers not to exceed certain speeds. TOPSTOP reliably regulates traffic at exits, loading areas, scales, intersections, etc. The yellow-black elements are clearly visible day and night.

The elements (5-RE and 20-RE) are connected by a groove and tenon system and then anchored.

Three heights for different speeds:

TOPSTOP 5-RE

(Construction height 70 mm) for 5–10 km/h

TOPSTOP 20-RE

(Construction height 50 mm) for 10–20 km/h

TOPSTOP 30-RE

(Construction height 30 mm) for 20–30 km/h

For use on public roads, TOPSTOP-20-RE and 30-RE are recommended.

- Enforces appropriate driving behavior
- Grippy profile even in wet conditions
- Clearly visible thanks to cat eyes (5-RE and 20-RE)
- Yellow end elements
- Easy installation

For occasional heavy traffic and permanent use, additional bonding of the elements is recommended.

- Recycled material
- For heavy traffic
- For 5 to 30 km/h
- Environmentally friendly
- Cost-effective

Execution	Element	Color	Dimension (mm) L x W x H	Shipping weight kg/pc.	Item	€/piece

- Corrosion protected and durable
- Ideal for tight space conditions
- Optimal visibility
- Color customizable
- Individual design

CITY protection bollard

MADE IN
GERMANY

Steel bollard for the protection of charging stations and securing the power unit (PowerUnit).

Visually appealing protection bollard made of round steel (2.9 mm wall thickness) or stainless steel (2 mm wall thickness), 108 mm Ø, 800 mm above ground. With elegantly designed aluminum cap and reflective rings.

Available in many variants for optimal color coordination of charging station and protection bollard.

Types of fastening:

- for embedding in concrete, total height: 1,200 mm
- for screw mounting, base plate: Ø 200 x 6 mm, drill hole: Ø 14 mm

Additional options

- other heights and diameters
- removable with triangular lock or cylinder lock

Available on request with additional potential equalization (HD 60364/OVE E 8101) (surcharge).

Scooter-Parker

CITY-Scooter-Parker 5 parking spaces

High-quality scooter parking made of bent flat steel with space for 5 scooters. For adjustment on both sides. Discreet, high-quality design. For a well-kept urban appearance.

Securing the scooters possible with curtains or a cable lock.

Dimension s:
Height: 400 mm
Material: Ø Flat steel, 70 x 10 mm
holding clamp closed: inside 60 mm outside 120 mm

Surface treatment:

- Hot-dip galvanized
- Hot-dip galvanized and coated in anthracite iron glitter (DB 703) in fine structure optics

Mounting type:

- For doweling drill hole: Ø 14 mm

Delivery is unassembled (clamps included).

MADE IN GERMANY

- Made of bent flat steel
- Modern, contemporary design
- Double-sided adjustment possible
- For (electric) scooters

CITY-Scooter-Parker GILA

The GILA scooter parking system for wall mounting is ideal when anchoring to the ground is not possible or not desired. Space-saving and freely mountable in height.

Modern and at the same time unobtrusive design, high-quality workmanship made of quality steel. Additional diagonal braces provide increased stability. With 6 holding clamps to secure the scooter with curtains or a cable lock. The clamps can be reordered at any time.

Dimension s:
Height: 250 mm
Width: D 1.100 mm
epth: Ma 250 mm
aterial: Dri Flat steel, 70 x 8 mm
lling hole: Ø 14 mm

Surface treatment:

- Hot-dip galvanized
- Hot-dip galvanized and coated in anthracite iron glitter (DB 703) in fine structure optics

Type of fastening:

- For wall mounting

MADE IN GERMANY

- Space-saving wall mounting
- Made of bent flat steel
- Modern, urban design
- Plenty of parking in a small space

Holding clamps:

Material: Steel
Surface treatment: hot-dip galvanized and black plastic coated Ø holding clamps closed: inner 60 mm, outer 120 mm
Ø Borehole: 20 mm
Delivery is unassembled (Clamps, screws, and nuts for clamp attachment included). 6 dowels for wall mounting required (by the customer).

- For wall mounting
- Available in three practical versions
- Suitable for indoor and outdoor use
- Durable and weather-resistant

180° rotatable

CITY bicycle rack wall parker

straight version, 45° version, 180° rotatable

With a swivel range of up to 180°, the wall parker allows for the lateral adjustment of bicycles.

Made of galvanized steel with round tube bracket. This space-saving bracket is versatile and suitable for all bicycles with tire widths up to 68 mm. Due to its simple adjustment and pre-assembled construction, it is ready for use immediately.

The installation is done using a wall plate that is anchored.

The wall parker with a 45-degree angle, mountable on both the left and right, adapts flexibly to different spatial conditions and individual needs. Made of hot-dip galvanized steel, it offers reliable long-term use for indoor and outdoor areas.

With a tire width of up to 68 mm, it offers enough space for various types of bicycles. No risk of injury thanks to all-round rounded arches.

Additionally, the wall parking system is also available in a straight version.

45° version

straight version

Version	Number of bicycles	Dimensions (mm) W x H x D	Shipping weight kg/pc.	Article	€/St.
straight	1	250 x 540 x 210	2.5	169.26.860	
45°		250 x 540 x 260	2.8	169.20.849	
180° rotatable		330 x 310 x 290	1.6	169.22.820	

Bicycle rack

CITY bicycle rack LUNA round

The robust bicycle rack made of hot-dip galvanized steel is equipped with round tube brackets with a diameter of 18 mm. The high and low positioned brackets allow for space-saving use.

It is suitable for mountain bikes with up to 68 mm tire width and bikes with disc brakes. The arched bracket allows for both one-sided and two-sided parking of the bikes. With one-sided bike adjustment, the space depth is about 1850 mm, and with two-sided bike adjustment, it is about 3,200 mm.

- Suitable for different bicycle parking facilities
- Up to 68 mm tire width
- Two-sided adjustment possible
- Prepared for row connection (endless assembly)

The delivery is made in disassembled condition. All mounting materials as well as a detailed instruction manual are included in the package.

Height : 410 mm
Depth: 385 mm

3	1,050	8.5	169.27.661	

CITY bicycle rack VARIO

The modern CITY bicycle rack VARIO is the ideal choice for a single parking space.

It consists of a robust, galvanized steel construction and is also suitable for mountain bikes.

With a maximum tire width of 68 mm and a height above the ground of about 540 mm, it is suitable for various types of bicycles.

The attachment is done by screwing on. The all-round rounded arches ensure a safe storage of the bicycle.

Height : 540 mm
Depth: 440 mm

- For wall and floor mounting
- Suitable for indoor and outdoor use
- Safe storage through all-round rounded arches
- Cost-effective

CITY wall mount
CIELO

The space-saving CITY wall mount CIELO is designed to create space and maintain order. It is suitable for all types of bicycles, regardless of their tire width.

The construction consists of high-load steel angles with solid hanging hooks, which are equipped with steel ring eyes as theft protection. The hanging hooks are provided with a rim-protecting plastic coating in inconspicuous red.

Thanks to the galvanization, the system is protected against corrosion. The hooks are alternately 200 mm and 350 mm long, and the hook spacing is only 350 mm, allowing for a staggered suspension.

The recommended mounting height is about 2,000 mm (wall or ceiling mounting possible).

The delivery is in disassembled condition. All mounting materials as well as a detailed instruction manual are included in the package.

Poller

- Made of flexible plastic
- Yielding
- Two colors

CITY-Poller FLEX

Proven material in a new application: Yielding city bollards made of high-quality plastic (TPU). Flexible and yet shape-stable.

Due to the classic design, the CITY-Poller FLEX appears like a conventional city bollard, whose yielding property is only noticeable upon impact.

Absorbs starting forces, protects vehicle and bollard. Particularly suitable in narrow traffic areas.

Type of attachment:
for bolting down

Also available as a crash protection bollard FLEX in yellow-black and red-white.

Base plate: 140 x 140 x 25 mm
Drill hole: Ø 14 mm

Note:
TPU = Thermoplastic Polyurethane
Environmentally friendly and biodegradable

System railing

**New color
DB 703**

- TÜV certified according to DGUV 208-061
- Variable modular system
- Easy to assemble
- Adaptable to slopes and curves

MORION system railing

**MADE IN
GERMANY**

TIP:

Also available in the conductive variant (p. 200)

Variable protective railings in a modular system. Secures traffic routes in operation, on public roads and squares. Separates lanes or different types of traffic from each other (public transport, stops). Used as a circulation barrier or people guidance system.

Practical: Variably adjustable connecting elements correct height compensation on uneven floors.

Two designs:

Design URBAN with flat cap and Design CLASSIQUE with round cap.

Consisting of:

- Vertical and horizontal pipes
- Clamps and caps made of aluminum
- Connecting parts made of plastic (electrically non-conductive)
- Stainless steel screws.

Standard overhead height 1,000 mm according to workplace guidelines. Any horizontal angles over 90° and vertical angles (inclines) up to 45° adjustable.

Surface treatment:

Hot-dip galvanized or hot-dip galvanized and painted/coated.

Types of fastening:

- For embedding in concrete
- For bolting with base plate
- For removal from non-lockable base sleeve

For a slimmer appearance, the cross tubes are also available with a diameter of 48 mm.

Other versions (height, length, color) or stainless steel upon request.

Max. power consumption;
for details please request the data sheet.

System railing - conductive

NEW

- TÜV certified according to DGUV 208-061
- In accordance with the specifications of the German Railway according to DIN VDE 0100-706, VDE 0105-100, based on OVE E 8101 and HD 60364
- Electrically conductive, with grounding lugs
- Flexible modular system for versatile applications
- Angle adjustment up to 45° for uneven terrain

MORION system railing

conductive

MADE IN GERMANY

Max. power consumption;
for details please request the data sheet.

The MORION system railing is a professional solution for electrically conductive safety railings, characterized by its robust, flexible modular system. It can be ideally adapted to the individual requirements of traffic routes and various terrain forms and was specifically developed for use in the environment of Deutsche Bahn.

The railing is equipped with grounding lugs and electrically conductive connecting elements that allow for reliable dissipation of electrical currents. When installed correctly, it meets the grounding requirements.

Potential equalization and lightning protection complies with the specifications of Deutsche Bahn as well as the standards DIN VDE 0100-706, VDE 0105-100, based on OVE E 8101 and HD 60364.

Technical features:

- Vertical and horizontal pipes with 60 mm Ø
- Wall thickness: 2.0 mm
- Material: S235 (St 37)
- Corrosion resistant through hot-dip galvanized surface
- Electrically conductive connecting parts made of aluminum, with stainless steel screws
- Conductivity 10.5 mS/m (0.365 mΩ)
- Flexible angle adjustment up to 45° for uneven terrain

• Standard above-ground height of 1000 mm according to workplace guidelines

• Mounting options: Cast-in or bolt-on with base plate

Welded grounding tab
50 x 50 x 5 mm with 18 mm hole

Design URBAN – conductive standpipe made of steel, with cover cap – 2.0 mm wall thickness

MORION stainless steel band and stainless steel loops

For permanently or temporarily securing traffic signs, traffic lights, etc. in conjunction with MORION band clamps.

Proven for creating hose connections, for holding pipes, lines, masts, sleepers, planks (protection against splicing), objects of various or irregular cross-sections, for mounting waste bins, control boxes, etc.

Cleanly rounded edges protect against injuries.

- Multi-purpose band made of corrosion-resistant stainless steel.
- Loops made of stainless steel.

Tensioning tool:

For securing and tensioning the stainless steel bands

CARAMBA pipe clamps

Base and bridge made from one piece. The offset bridge facilitates assembly. With two galvanized clamp screws M8/25.

Drilling distance 50 – 90 mm.

MORION pipe clamps

The lower part and the bridge are riveted. With 2 galvanized clamp screws M8/25.

Drilling distance 50-90 mm.

MORION Band Clamps

For attaching signs to masts, etc., regardless of the cross-section of the mast. In conjunction with MORION stainless steel band. Band steel, hot-dip galvanized.

Two drill slots 7/28 mm for sign attachment. Drill spacing 50-90 mm.

Barrier gates

COMPACT System barrier with gas spring

MADE IN
GERMANY

More info
about the
product:

System barrier with integrated gas spring for high operating comfort. The modern design, high quality standards, and the already fully equipped standard version leave little to be desired:

- All steel parts galvanized and powder-coated red
- Wide aluminum beam with anti-slip strip and reflective strip
- Including locking cylinder

Two versions:

With fixed support post or with swing support

Rotating and support post for bolting down (can be embedded in concrete upon request).

Support post height adjustable (see p. 207).

Dimensions:

Rotating post:	220 x 100 x 1,000 mm
Base plate:	295 x 295 x 10 mm
Support post:	50 x 50 x 1,000 mm
Base plate:	200 x 200 x 10 mm
Alu-tree:	90 x 60 mm

The locking bolt of the COMPACTSystem barrier automatically locks in the open and closed position. Lockable with a different locking round cylinder, including 2 keys. (The key can only be removed in the locked position.)

Further locking options:

- Triangular lock instead of round cylinder
- Round cylinder keyed alike
- Prepared for customer-side profile cylinder
- Double locking: triangular lock and profile cylinder

- i**
- High operating comfort
 - Compact design
 - Various closing variants
 - Safety closure (automatically locking)

PARAT gate barrier

MADE IN
GERMANY

Durable, two-sided gate barrier, horizontally pivotable. With one fixed, yet rotatable post and one removable post. For temporarily blocking paths, driveways, etc.

All steel parts are hot-dip galvanized and painted red and white. Post with two recesses for receiving the crossbeams. For embedding in concrete.

Lockable with a side triangular lock according to DIN 3223.

A triangular key is included in the scope of delivery.

Locking option: Cylinder lock, including 2 keys

MORION height limiter aluminum

Secures entrances, underpasses, and overbuildings (passages). For parking garages, halls, buildings, or facilities with restricted height.

Aluminum profile with side protective caps, 150 x 20 mm (H x D), one side covered with reflective type-1 film (double-sided on request).

Suspension by two knot chains with steel ring and screws, galvanically galvanized, each 2 m long.

- Aluminum profile
- Reflective
- Including chain
- Various widths

Traffic Management

DISCOVER OUR DIVERSITY OF TRAFFIC SOLUTIONS!

Our comprehensive traffic management range, including our successful private label GAMMA, offers thoughtful solutions for the efficient control and security of traffic flows. Our range includes a variety of solutions such as traffic islands, elastic curbs, and paving stones that reflect the diversity of our offerings. Trust our expertise to optimally organize and protect traffic areas.

GAMMA traffic island

The GAMMA traffic island separates and organizes traffic flows. It serves as a crossing aid, protects pedestrians, mitigates intersections, and entrance and exit points, etc.

The semicircular traffic island is modular and available in two sizes. It is made of pure rubber granulate. This material is particularly suitable as it absorbs impact forces better than rigid materials made of concrete or plastic.

Note:

In traffic areas with high vehicle volume, it is advisable to additionally glue the outer ring to the roadway.

Each traffic island consists of an outer ring that is bolted to the roadway and two inner parts. This makes the transport of the traffic island, the handling on site, and the assembly completely hassle-free.

The inner parts have a recess (60 mm) for the reception of the sign posts.

Cost-effective variant: The high stability of the outer ring allows for assembly without inner parts. The inner area of the traffic island can alternatively be planted, or – as is common in some European countries – filled with (coarse) gravel, stones, or chippings.

Advantages:

- very affordable and flexible
- quickly assembled, saves complicated traffic management
- easier transport (no loading crane required)
- absorbs starting forces
- adapts to the road curvature
- plantable inner island

Outer ring of the GAMMA traffic island, silver-gray, with white reflective tape. Anchoring points for the reception of the mounting dowels (included).

Inner part of the GAMMA traffic island, silver-gray, with cutout for pipe post 60 mm. For insertion into the traffic island.

Traffic island

Execution

The base color of the elements is silver-gray. Outer ring with white reflective tape.

GAMMA Elastic curbstones

TIP:

Elastic curbs must fundamentally be supported with solid materials, such as asphalt (up to 80 °C), concrete, paving stones, etc. The support can be formed as a wedge so that the remaining area can be filled with topsoil and planted, possibly excavated beforehand.

Retroreflective, flexible curbstones – a brilliant idea

Versatile, flexible retroreflective traffic element for

- Limiting/encasing traffic islands and road dividers*
- Limiting/encasing sidewalk widenings and road narrowing, road constriction
- Curbstone elevation/traffic island elevation
- Wheel guidance in parking garage exits (protection of rims and tires against rubbing on the curb)
- Curb protection in tunnels and underpasses (increased visibility through retroreflective tape)

*Minimum diameter:
250 cm/15 cm height
350 cm/10 cm height

An elastic curbstone has different leg lengths: 10 and 15 cm. This allows for two construction heights with an elastic curbstone.

Matching corner elements (90°) are also available.

Optionally black or reddish-brown.

Elastic curbs can be cut on-site with a pendulum jigsaw or mitered.

The elements are secured with road dowels. In continuous assembly, they are glued together at the ends.

Speed bumps

Dynamically effective speed bumps, such as the so-called "Berliner Kissen", are the most effective form of speed reduction. In addition to the dynamic effect, there is always a psychological effect, as the elements appear higher than they actually are.

The speed bumps used in public areas (minimum size 180 x 300 cm) made of recycled rubber offer additional advantages:

1. They can be easily crossed by all vehicles.
2. They provide maximum sound insulation when crossed.
3. The effect of traffic calming is more area-wide than point-specific.

The (road) thresholds that can also occasionally be found in public areas have disadvantages compared to the (longer) speed bumps, as their short crossing length achieves a more jolting, dynamic effect. Thresholds are therefore only effective at specific points and do not lead to the desired linear traffic calming.

The significantly higher noise emissions when driving over them also argue against their use in residential areas. Therefore, thresholds can only be recommended for public roads in exceptional cases.

TIP:

For design reasons, the black version is generally recommended for pavements, as it does not change its appearance even after years.

Plateau speed bumps are always preferred over large area partial speed bumps, especially when cyclists share the road. Additionally, the water drainage is maintained. Therefore, only examples of plateau speed bumps are presented here.

The water drainage is maintained. Therefore, only examples of plateau speed bumps are presented here.

Plateau speed bump in the stretch area; road width at least 3.30 m.

Split plateau pavement

offer maximum flexibility: Buses and trucks can practically drive over these split plateaus unhindered. The lateral distance between the split pavements must not exceed 120 cm. Otherwise, cars try

drivers to "slip through" the center of the roadway – between the pavements. The lateral bypassing of the pavement – over the sidewalk – is prevented by bollards, railings, planting beds, etc.

Split plateau pavement in the stretch area; road width at least 5.80 m.

Split plateau pavement at the intersection; road width at least 5.80 m.

If only individual speed bumps are used, the speed especially in the area of the speed bumps decreases. Maintaining a certain 85-percent speed (V85) can be achieved linearly through the repetition of speed bumps after about 50 to 80 meters and/or through accompanying measures.

Here, complementary elements made from the same material, such as elastic curbs and traffic islands, are offered, with which islands, crossing aids, lane separations, etc. can be designed cost-effectively "in one piece."

The speed bump elements described below are made from recycled rubber (car tires). These elements are particularly resident-friendly, as rolling over rubber elements is significantly quieter than over concrete, paving, etc.

TIP:

We recommend placing a traffic sign (Z112) in both directions so that winter services, street sweepers, etc. can recognize the speed bumps.

TIP:

Tip: For pavements that are installed long-term, we additionally recommend securing them with road dowels and applying adhesive over the entire area. For medium-term use, we recommend at least gluing the edge areas to prevent dirt (gravel, sand, small stones) from penetrating between the roadway and the ramp. Where both is not possible or not desired, an injection resin (by the contractor) can strengthen the connection between the dowel and the road structure.

TIP:

Pavements for area-wide traffic calming should generally be laid in the direction of travel (and not across it). Exception: At focal points (schools, kindergartens...) it may be sensible to lay them across the direction of travel for a point-specific traffic calming.

Speed bumps

GAMMA Berlin cushions EU

For speed reduction within 10 km/h and 30 km/h zones. Usable for both junctions and along routes (street sections).

The Berlin cushion EU has differently steep ramp inclinations. Thus, (viewed from the direction of travel) the side ramp inclination is steeper than the front and end ramp.

For the area-wide achievement of a target speed (V85) of max.
At 30 km/h, the cushions are laid lengthwise. The lower ramp inclination – in conjunction with the "pleasant" feeling of going up and down – increases the acceptance of road users.

The desired point effect in exceptions (kindergarten, school) is achieved by laying the

The cushions reach across the roadway. Here, the steeper ramp and the short crossing distance create a significantly more uncomfortable dynamic driving effect.

Berlin cushions EU are often used as the first measure when transitioning from 50 to 30 km/h. This makes the change to the lower speed clear to the road user.

Berlin cushions EU are safe for all vehicles to cross due to their low height (6.5 cm).

Berlin cushions EU are divided plateau speed bumps; thus, existing drainage facilities can be retained.

Note:
Buses can pass over the Berlin cushions EU without hindrance. The buses only drive over the flat edge areas of the cushion due to the larger axle width (outer width 180 cm; plateau 120 cm), which remains without effect on driving dynamics.

- i*
 - Made of 100% vulcanized rubber
 - Effective speed limitation
 - Low noise and user-friendly
 - Durable and recyclable
 - Easy installation

GAMMA
Berlin cushion oval

The Berlin cushion in oval sinusoidal design is a high-quality, durable road cushion made of layer-vulcanized recycled rubber. Available in black or red, each with a white edge. Due to the vibration-insulating construction, it has lower noise pollution compared to other speed bumps.

The ramp gradient in a ratio of 1:8 creates a psychological effect for speed reduction to < 50 km/h. In combination with accompanying measures such as signage or road shifts, it is also suitable for speed limits in 30 km/h zones and traffic-calmed areas.

The low height of 7 cm can be easily crossed by all vehicles. The width of 180 cm makes the cushion user-friendly for buses, ambulances, and cyclists. The recommended distance between two cushions is between 70 to 140 m.

A set consists of 6 or 8 elements that are easily and securely connected using H-beams. Disassembly and storage, as well as later reuse of the set, is possible without any problems. The required fastening accessories are included in the delivery.

Raised Pavements

GAMMA Plateau Cushion

For speed reduction within 10 km/h and 30 km/h zones.

The GAMMA Plateau Cushion made of vulcanized rubber is a modular "construction kit" with different shape parts. This allows for variable raised pavements in size (width and length).

Consciously, as with the Berlin Cushion, different ramp inclinations were also chosen: Front and end elements are flat rising/falling (1:15), while the side elements rise significantly steeper (1:3).

Effect:

- High acceptance due to a moderate dynamic effect.

TIP:

For paving that is to be installed long-term, we recommend additionally securing with road dowels and applying adhesive over the entire area of the elements. For medium-term use, we recommend at least gluing the edge areas to prevent dirt (gravel, sand, small stones) from penetrating between the roadway and the ramp.

- Road users avoid driving over the side area that slopes towards the curb. The often observed "lateral evasion" usually does not occur.

All elements of the GAMMA plateau cushion have dimensions of 45 x 100 x 7.5 cm (W x L x H). The starting elements are wedge-shaped and rise from 0.8 cm to 7.5 cm. The middle elements are consistently 7.5 cm high.

For better connection of the elements to each other, the integrated groove and tongue system is used. Additional support is provided by an H-profile made of steel. The installation is done by doweling. Fastening material included (6 dowels and screws per element).

The elements are black throughout, with white reflective areas. White triangles in the direction of travel and rectangles running sideways to visually delineate the plateau.

Depending on the road width, four different plateau cushions have been predefined. The lateral distances to the curb should be between 60 and 80 cm (for cyclists).

GAMMA plateau cushion (including fastening material)	Plateau size (W x L)	approx. road width
Set A:	270 x 400 cm	390 to 430 cm
Set B:	315 x 400 cm	435 to 475 cm
Set C:	405 x 400 cm	525 to 565 cm
Set D:	495 x 400 cm	615 to 655 cm
Other sizes are easily possible. In width in steps of 45 cm and in length by 100 cm each.
